## Westchester 2025 Buildout Analysis Methodology Overview

Buildout analysis includes two distinct steps:

- A. Vacant parcel analysis
- B. “Underdeveloped” / “Soft Site” parcel analysis

Full buildout impacts are calculated by adding the future buildout conditions (Vacant + “Underdeveloped”) to existing conditions. All vacant or “underdeveloped” analyses are assigned an efficiency of development factor to account for infrastructure needs such as new roadways, driveways, sewers, septic etc. required during the development process. Historically, development efficiency factors range from 60%-90% in Westchester depending on the size of developable lots and overall density of the municipality.

### **A. Vacant Parcel Analysis**

The vacant parcel analysis gives the municipality a realistic view of what can be developed on currently vacant land (as coded in the official WC Land Use Layer) under existing zoning regulations. Local environmental constraints to development and bulk regulations are input into the model to accurately calculate potential buildout by parcel. The following GIS data layers are required to conduct the vacant parcel analysis: Tax Parcels, Land Use, Zoning, Slopes, DEC Wetlands, National Wetland Inventory, Hydric Soils, Lakes, Flood Zones.

The vacant parcel buildout process is broken out into five distinct phases:

1. Setting up a new vacant parcel analysis in CommunityViz
2. Creating vacant parcel data layers
3. Creating environmental constraints data layers
4. Running the buildout model
5. Exporting results and preparing presentation material

## **B. “Underdeveloped” / “Soft Site” Parcel Analysis**

The “Underdeveloped” parcel analysis identifies the remaining development potential available under existing zoning regulations on already developed sites. There are two methods used to identify “underdeveloped” parcels depending on the fabric of the municipality and overall concentration of density. The first entails setting parcel area criteria to determine realistically sub-dividable parcels per existing zoning regulations. For example, a single family zoned parcel that is twice (2x) or three times (3x) larger than the minimum required lot size for its zoning district can theoretically be subdivided as of right and can thus be classified as “underdeveloped”. Likewise, remaining non-residential development potential is identified by subtracting **existing built square footages** from full buildout under existing zoning using FAR regulations. Non-residential “soft-sites” are defined as those parcels in which existing development is 50% or less than what is allowed under zoning.

The underdeveloped parcel analysis is a two-pronged approach:

1. **Residential Zoned Dwelling Unit buildout:** Run model on residentially zoned parcels using 3x minimum lot size as criteria for “underdeveloped” parcels and subtract existing DU (Total Units attribute) from exported parcel point file when running buildout model.
2. **Non-Residential Zoned Development Potential buildout (Sq. Ft.):**  
Run model on non-residentially zoned parcels that have existing sq. ft. attribute column from **assessment data/ building footprints** to determine remaining Sq. Ft. potential by parcel. FAR regulations will be entered to determine the remaining development potential by lot. Use 50% development (i.e. existing Sq. Ft. is 50% or less than what is permitted relative to FAR) as criteria for determining “underdeveloped” non-residential parcels. \*\*Important to note that this 50% criteria is calculated by dividing existing Sq. Ft. by gross lot area. Environmental and land use constraints are factored in during the model and will further reduce development potential.

If the zoning is mixed use, the output square footage will be divided by 800/900 Sq. Ft. to determine the potential maximum number of dwelling units for those parcels (to be added to the results from the Residential Zoned Dwelling Unit Buildout calculation in Phase 1).

The following six data layers (in addition to the environmental constraint layers created in vacant analysis) need to be created to conduct the “Underdeveloped” parcel analysis:

1. **3X Residentially Zoned Parcels**  
(Parcel size three times what is required under zoning, i.e. candidates for subdivision)
2. **Existing Dwelling Units**  
(Point file created from parcel based zoning layer)

3. **Existing non-residential Sq. Ft.**  
(Point file from parcel based zoning either created by manual entry/attribute join or from footprint calculation approach in which you spatially join **bm.building** point layer to **Non-Residentially Zoned** polygon layer)
4. **Non Residential “Soft Sites”**  
(Existing SQ. Ft. 50% or less than permitted under existing FAR regulations)
5. **Land Use Constraints**  
(Institutional and Public Assembly, Cemeteries, Transportation/Communication/Utilities, Water Supply Lands, Public Parks and Parkway Lands, Nature Preserves)
6. **Bm.building** (Building footprints)

## Westchester 2025 Buildout Analysis "Zoning Regulations Intake Form"

City/Town/Village of Mamaroneck Existing Zoning Regulations

2025 Buildout Model Data Questions:

Assumption of the approximate residential/commercial sq. ft. breakdown for new development in mixed-use zones?

75% / 25%

60% / 40%

50% / 50%

Other: \_\_\_\_\_

Steep slope definition and regulations?  
If so define: (e.g. limited development on 15% slopes, no development on 25%+ etc.)

None

\_\_\_\_\_

Wetland regulations? If so define:  
(e.g. no development in 100 ft. wetland buffer)

Yes

Regulated development allowed within 100' buffer

\_\_\_\_\_

List parcels with existing institutional uses that have realistic development potential. (i.e. you

\_\_\_\_\_

want them included in the "underdeveloped"  
parcel analysis, either for potential subdivision or  
change in use.)

**Have there been any major developments  
(30,000 Sq. Ft. +) since 2004?  
If so list name, total sq. ft. and SBL**

---

*Name*

*Total Sq. Ft.*

*Section, Block, Lot*

Sheldrake Apartments, Van Ranst Place -- +/-35 units; ~45,000 s.f.

Sweetwater Apartments, Stanley Avenue -- +/-100 units; ~100,000 s.f.

---

---

---

---

# Village of Mamaroneck

## Westchester County, New York

# Build-Out Analysis Results:

## C. Vacant and Underdeveloped Parcels Composite

# Village of Mamaroneck Draft Buildout Results

	Vacant Parcel Buildout	Underdeveloped Parcel Buildout	Future Buildout Potential (Vacant + Underdeveloped)	Existing Conditions	Total Buildout (Vacant + Underdeveloped + Existing)	Total Buildout Increase	Vacant Parcel Increase
Total Parcels	208	1,053	1,261	4,685			
Buildable Parcels	102	945	1,047	1,661			
Dwelling Units	95	607	702	7,328	8,030	10%	1%
Population	247	1,578	1,825	18,763	20,588	10%	1%
School Children	59	831	890	TBD	TBD	TBD	TBD
HH Energy Use (BTU/Year)	9,595	61,307	70,902	740,128	811,030	10%	1%
HH Water Consumption (Gal/Year)	13,557,925	86,628,005	100,185,930	1,045,815,520	1,146,001,450	10%	1%
Vehicle Trips per day	565	3,612	4,177	43,602	47,779	10%	1%
Non-Residential sq. ft.	59,119	547,822	606,941				
Non-Residential Energy Use (BTU/Year)	5,031,027	46,619,652	51,650,679				

Prepared by the Westchester County Department of Planning, 9/2010

\*Vacant buildable parcels include those that meet minimum lot sizes per existing zoning.

\*\*Underdeveloped buildable parcels include parcels two times (2x) the minimum lot size for residential zones and those in which existing built sq. ft. is less than 50% of what is permitted under zoning in non-residential zones.

# Village of Mamaroneck Draft Buildout Results

## Buildout Map Tables

**A. Vacant Buildout**

Buildable Vacant Parcels	102
Buildable Parcel Area (acres)	55
Potential New Dwelling Units	95
Potential Population Increase	247
Potential Non-Residential Sq. Ft.	59,119

**B. Underdeveloped Buildout**

Buildable Underdeveloped Parcels	945
Buildable Parcel Area (acres)	570
Potential New Dwelling Units	607
Potential Population Increase	1,578
Potential Non-Residential Sq. Ft.	547,822

**C. Composite Buildout**

Buildable Vacant Parcels*	102
Buildable Underdeveloped Parcels*	945
Total Buildable Parcels	1,047
Buildable Parcel Area (acres)	625
Potential New Dwelling Units	702
Potential Population Increase***	1,825
Potential Non-Residential Sq. Ft.	606,941

## Potential New Students

		Dwelling Units	Students
<b><i>Vacant Buildout</i></b>	Single Family	57	40
	Multi-Family/Apts	38	19
		95	59

		Dwelling Units	Students
<b><i>Underdeveloped Buildout</i></b>	Single Family	170	121
	Multi-Family/Apts	437	214
		607	831

Student Multipliers: Single Family Unit = .71 students  
Multi-Family Unit = .49 students
