

We have a quiet start to the work week, but it will be hot today with a fair amount of sunshine. The weather becomes more active starting tonight as Tropical Storm Isaias begins to trek north along the Eastern Seaboard. Scattered showers are expected to develop around Midnight and become more numerous towards morning along with a few downpours. Periods of rain and torrential downpours will continue through the day tomorrow as Isaias moves right over the Hudson Valley. Rainfall amounts of up to 5 inches is possible by Tuesday evening before the storm quickly moves out of the area. Poor drainage and roadway flooding will be an issue, especially during prolonged downpours which will contain high rainfall rates. Also, wind gusts up to 60 mph can be expected tomorrow as well. This, combined with the saturated ground can result in down trees and even some powerlines. High pressure returns to the area on Wednesday with a dry stretch of weather to follow for the end of the week.

HAZARD OVERVIEW			
Hazard	Mon	Tue - Wed	Description
Severe Weather	None	High	Wind gusts up to 60 mph are expected late tomorrow with Isaias
Flooding	None	High	Heavy rainfall associated with Isaias later tonight and Tuesday will result in a much greater than normal threat for poor drainage, stream, and even river flooding.
Coastal	None	Moderate	Tides will run 1.5 - 3 feet above normal tonight through Tuesday.
