Re: Phase I Environmental Site Assessment

Hampshire Country Club

1025 Cover Road

Mamaroneck, New York

Dear Mr. Junghans:

In accordance with our proposal dated December 30, 2015 (revised February 2, 2016), GZA GeoEnvironmental of New York (GZA) is pleased to provide the attached Phase I Environmental Site Assessment Report. This assessment was completed in general accordance with the guidelines described in ASTM International's *Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

This Report is based on our review of available historical and environmental records, visual observations of the surface of the subject and adjoining properties, and personal interviews with available persons having knowledge of the property. **Section 11.0**, Findings and Conclusions, is considered an Executive Summary, and **Section 11.0** should be reviewed in conjunction with the entire Report.

We hope this satisfies your present needs. If you need any additional information, please call Stephen Kline or John Gavras at 212-594-8140.

Very truly yours,

GZA GEOENVIRONMENTAL OF NEW YORK

Stephen M. Kline

1.0 INTRODUCTION

1.1 PROJECT AUTHORIZATION

This report presents the results of a Phase I Environmental Site Assessment (Report) conducted by GZA GeoEnvironmental of New York (GZA) for VHB (Client) at property identified as the Hampshire Country Club at 1025 Cove Road in Mamaroneck, New York (Site). The Site visit portion of the environmental assessment was conducted on February 23, 2016. Authorization to proceed on this project was granted in accordance with GZA's signed proposal February 2, 2016.

The scope of work described below was designed to be in general accordance with ASTM International's Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (ASTM E1527-13). As specified in our proposal for this work, we have assumed that the purpose of this Report is to assist the User of this Report in qualifying for Landowner Liability Protection (LLP) against CERCLA liability. We have also assumed that this assessment is not being funded, in whole or in part, with a federal grant under the EPA Brownfield Assessment and Characterization Program, and is not being funded by the US Small Business Administration.

1.2 PROJECT OBJECTIVES

The objectives of this Phase I Environmental Site Assessment were:

- To render an opinion as to whether surficial or historical evidence indicates the presence of recognized environmental conditions, controlled recognized environmental conditions, and/or historical recognized environmental conditions, which could result in the presence of hazardous materials in the environment, as defined in the ASTM E1527-13; and
- To permit the User of this assessment to satisfy one of the requirements to qualify for certain Landowner Liability Protections under CERCLA.

As defined by ASTM E1527-13, he term recognized environmental condition (REC) means "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment". De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition (CREC) means "a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

In addition, an historical recognized environmental condition (HREC) means "a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls."

File No. 41.0162403.00 Page | 2

1.3 SCOPE OF SERVICES

GZA's assessment of the Site was completed in general accordance with ASTM E1527-13 and GZA's proposal for services. GZA's scope of services consisted of the following activities:

- Review of federal and state regulatory agency databases identified by ASTM for the Site and a selected radius around the Site;
- Contact with local environmental regulatory agencies to inquire about environmental conditions at the Site and in its vicinity;
- Review of the Site history through available ASTM Standard Historical Sources;
- A Site reconnaissance to make surficial observations for evidence of recognized environmental conditions;
- A vicinity reconnaissance of properties within ¼ mile of the Site;
- A review of adjoining properties to identify the potential use of hazardous materials;
- An interview with the Key Site Manager as well as certain other available occupants and major tenants regarding the current and past Site usage and facility operations; and
- Preparation of this Report of our findings.

Omissions to ASTM E1527-13 include:

- ASTM identifies a title search for environmental liens as a User Responsibility and recommends that the User
 provide it to the Environmental Professional for review. The Client did not provide a title search for our
 review. In GZA's opinion, however, this is not a significant data gap since the history of the Site is well
 documented through other means.
- Building department permits were not reviewed and past owners were not interviewed as part of this
 assessment. However, it is unlikely that these resources would provide information not obtained from other
 sources.

It should be noted that GZA's study does not include ASTM non-scope considerations, such as asbestos, lead paint, or regulatory compliance.

This Report presents GZA's field observations, results, and opinions. This Report is subject to modification if subsequent information is developed by GZA or any other party. This Report has been prepared in accordance with the limitations presented in **Section 13.0** and in **Appendix A**, and the terms and conditions of our proposal revised February 2, 2016 are also are included in **Appendix A**.

File No. 41.0162403.00

Page | 3

2.0 BACKGROUND SITE INFORMATION

The following information was obtained during GZA's Site reconnaissance and from interviews with people knowledgeable about the Site. Photographs depicting Site conditions at the time of GZA's assessment are presented in **Appendix B**. Additional information on Site use and area observations and activity at the Site is contained in **Sections 6.0 and 7.0**.

2.1 SITE LOCATION

The Site is located at 1025 Cove Road in Mamaroneck, New York. The Site is bounded by Delancey Cove to the south and residential neighborhoods to the north, west, and east. The border between the Village of Mamaroneck and the Town of Mamaroneck passes through the western portion of the Site. A Site Location Plan is attached as **Figure 1**.

2.2 <u>SITE DESCRIPTION</u>

The approximately 130-acre Site is known as Hampshire Country Club. The country club is identified in the Village of Mamaroneck Section 9, and the following assessor's block and lot numbers:

Block 35: Lot 700, Block 36: Lot 1

Block 42: Lots 367, 568, 659

Block 43: Lots 1, 12

As shown on **Figure 2**, the southern portion of the country club contains the clubhouse, which is a 1-story, 35,000-square foot frame and stone building. The primary clubhouse contains locker rooms, fitness rooms and dining areas. To the southwest of the primary clubhouse is the golf pro shop building, swimming pool, and swimming pool maintenance building. On the north side of Cove Road, is a caddy headquarters/golf cart storage garage building.

The central area is primarily comprised of the 18-hole golf course. Water hazards on the golf course consist of six (6) artificially created ponds are located throughout the golf course. Various sand traps and landscaped hills are located throughout the golf course. A comfort station/restroom is located on the north side of the golf course.

The northern side of the Site contains the maintenance areas. The maintenance area consists of a workshop building, a chemical storage shed, an equipment storage building and an equipment storage shed. This maintenance area is also the location of the three aboveground storage tanks (AST) at the Site.

2.3 <u>CURRENT SITE USE</u>

The Site is occupied by Hampshire Country Club. It is a private country club consisting of a golf course, tennis courts, a swimming pool, and associated buildings. Eagle Knolls Road, which turns into Cove Road, passes through the southern side of the Site, to the north of the primary clubhouse and parking areas.

A more detailed description of Site use is contained in **Section 6.2.3**.

File No. 41.0162403.00

Page | 4

2.4 ADJOINING PROPERTIES USE

The Site is adjoined by the following:

Direction	Street Address/Location	Name or Current Use
North	West Fairway Green, Old Post Lane, Sylvan Lane, Cooper Avenue, on which are residential properties.	Residential Properties
	Addresses:	
	1101 Fairway Green Road – 1403 Fairway	
	Green Road	
	500 Cooper Avenue	
	950 Sylvan Lane – 902 Sylvan Lane	
Northwest	Rockridge Road, on which are residential properties	Residential Properties
	Addresses:	
	4 Rockridge Road – 24 Rockridge Road	
West	130 Hommocks Road	Hommocks Middle School
Southwest	Eagle Knolls Road, beyond which is Flint Park and East Creek	Flint Park and East Creek
South	Eagle Knolls Road/Cove Road, on which are	Residential Properties
	residential properties.	
	Addresses:	
	10002 to 1110 Cove Road	
Southeast	Cove Road and Fairway Lane, on which are	Residential Properties
	residential properties.	
	Addresses:	
	722 Cove Road – 752 Cove Road	
	917 Cove Road - 925 Cove Road	
	931 Fairway Lane - 1000 Fairway Lane	
Northeast	Fairway Lane and Orienta Avenue, on which	Residential Properties
	are residential properties.	
	Addresses:	
	911 Fairway Lane – 931 Fairway Lane	
	511 Orienta Avenue – 601 Orienta Avenue	

2.5 AREA USE

The area surrounding the Site is generally used for residential purposes. Hommocks Middle School adjoins the Site to the west. Commercial properties, include restaurants, diners, grocery stores, and a motel are located along West Boston Post Road, which is located to the north of the Site, past Fairway Green and Old Boston Post Road. Mamaroneck High School is also located along West Boston Post Road. Elko Auto Repair is located at 1139 West

File No. 41.0162403.00 Page | 5

Boston Post Road, approximately 700 feet to the northwest of the Site. The Site vicinity reconnaissance is described in **Section 7.2.**

2.6 SITE UTILITIES

The following utilities provide service to the clubhouse building at the Site:

Service	Provider
Electricity	Consolidated Edison Company of New York
Drinking Water	Town of Mamaroneck
Sanitary Sewer Services	Town of Mamaroneck
Storm Water Services	Town of Mamaroneck

Although the clubhouse building is connected to the Town of Mamaroneck sanitary sewer, there are three on-Site septic tanks in use for the maintenance building, the golf course comfort station/restroom, and the tennis pavilion, as described in **Section 6.1.11**.

File No. 41.0162403.00 Page | 6

3.0 ENVIRONMENTAL SETTING

The following subsections provide information regarding the general physiographic, hydrologic, and soil conditions in the area of the Site. Information was gathered from various sources including a database research report provided by Environmental Data Resources (EDR), the previous reports reviewed by GZA in **Section 5.0**.

3.1 REGIONAL PHYSIOGRAPHY

Based on a review of the 2013 U.S. Geologic Survey Map for Mamaroneck, New York the Site is located at an approximate elevation between five and 10 feet above mean sea level (MSL). The general, regional topography slopes downward from the north to the south, with a localized higher elevation area running northeast of the Site and separating it from Mamaroneck Harbor further to the northeast of the Site. Running north to south in the middle of the Site are a series of small hills, which reach elevations greater than 20 feet above MSL, and slope downward towards the on-Site ponds in the eastern and southern portions of the Site. As shown on **Figure 1**, topography near the Site generally slopes downward towards Delancey Cove to the south of the Site.

3.2 GROUNDWATER CONDITIONS

Based on the information provided in the EDR report, the estimated depth to groundwater is approximately at less than 10 feet below ground surface (bgs). Based on a review of regional topography depicted on the USGS Map for the area, the inferred direction of groundwater flow is to the south towards Delancey Cove.

A groundwater observation well was installed at the Site during a geotechnical investigation on March 1, 2016. The measured depth to groundwater at the monitoring well was less than 5 feet bgs. It should be noted that changes in groundwater levels will occur due to variations in seasonal influences, tidal fluctuations, precipitation amounts, local pumping, utility leakage, and other factors different from those existing at the time the observations were made.

3.3 SOIL AND ROCK CONDITIONS

Based on the results of the subsurface exploration program conducted as part of the geotechnical investigation at the Site, the subsurface conditions at the Site generally a thin overburden overlaying shallow bedrock. The stratum were generally described as consisting of the following, in order of increasing depth:

- SURFACE COVER A three to four-inch thick topsoil/sod layer typically was observed at the ground surface.
- FILL Fill, consisting of gray/tan, fine to coarse sand, was encountered in some of the test borings.
- SILT AND CLAY A Silt and Clay stratum, consisting of gray, silt, and clay, was encountered immediately below the surface cover in most locations to depths ranging between 2 and 4 feet bgs.
- PEAT A fibrous peat layer and other wetland deposits were noted in the eastern portions of the Site.

File No. 41.0162403.00

Page | 7

- SAND A Sand stratum, consisting of gray/brown, fine to coarse sand, was encountered in each test boring below the Surface Cover, Fill, or Silt and Clay layers to depths ranging from three to 17.5 feet bgs. The Sand stratum extended to the top of bedrock in each exploration.
- BEDROCK Refusal (presumed to be top of bedrock) was encountered at all of the test borings at depths ranging from three to 17.5 feet bgs. The bedrock encountered consisted of slightly fractured, moderately weathered Gneiss.

File No. 41.0162403.00

Page | 8

4.0 HISTORICAL USE INFORMATION

The Site history was developed from ASTM Standard Historical Sources and available files at the Assessor's Office, and Health Department, and interviews with the Key Site Manager. A list of references and interviewed is included in **Section 9.0**.

ASTM indicates that "... all obvious uses of the property shall be identified from the present, back to the property's first developed use, or back to 1940, whichever is earlier." ASTM further indicates, "...data failure is not uncommon..." when trying to establish the historical use of a property. A historical summary report is provided in **Section 4.1**. Specific information obtained from ASTM historical sources is contained in following sections.

4.1 <u>SITE AND AREA HISTORY SUMMARY</u>

At the time of GZA's visit, the study Site was occupied by Hampshire Country Club, a private club consisting of a golf course, seven tennis courts, and associated buildings. Historically, the Site has been a country club since at least 1934, and the primary clubhouse has under gone several renovations since that time. A review of the historical Sanborn maps indicates that prior to 1934, the Site and the general vicinity consisted of vacant land utilized for agricultural purposes. The Hampshire Country Club website indicates that Devereux Emmet designed the golf course in 1927. A review of the historical topographic maps indicates that during the development of the country club, inlets from Long Island Sound and marshland that were present on the Site were backfilled. The source of the historic fill material is unknown.

4.2 <u>CITY DIRECTORIES REV</u>IEW

GZA reviewed Cole Information Services city directories provided by EDR for 2013, 2008, 2003, 1999, 1995, 1992, 1987, 1982, 1977, 1972. The Site was identified as "Hampshire Country Club" in each of the listings. Refer to **Appendix C** for the EDR City Directory Report. GZA did not identify listings for adjoining properties that indicated significant environmental concerns.

4.3 HISTORIC TOPOGRAPHIC MAP REVIEW

GZA reviewed historic USGS topographic maps provided by EDR for the years 2013, 1979, 1975, 1967, 1966, 1956, 1955, 1947, 1900, 1898 and 1897. The table below contains GZA's description of the Site and vicinity properties as shown on the historic topographic maps. Refer to **Appendix D** for the EDR Historic Topographic Report.

Year	Description of Site	Description of Vicinity
1898-1900	The Site appears to be vacant land. Extensive coastal marshland and streams are depicted on the eastern and western areas of the Site. Larchmont Harbor is depicted to the south of the Site. Site topography appears to be less than 10 feet above sea level.	The Site vicinity primarily consists of residential-type structures and agricultural use land.

Year	Description of Site	Description of Vicinity
1947	The country club has been developed. The	The topography in the vicinity remains

	of the golf course.	

4.4 **AERIAL PHOTOGRAPH REVIEW**

GZA reviewed historical aerial photographs provided by EDR for the years 2011, 2009, 2006, 1994, 1984, 1974, 1964, 1961, 1954, and 1951. The table below contains GZA's description of the Site and vicinity properties as shown in the aerial photographs. Refer to **Appendix E** for the EDR Aerial Photograph Report.

Year	Description of Site	Description of Vicinity
1951-1954	The country club is depicted as developed. The clubhouse is depicted on the southern side of the Site, however due to the quality of the aerials, specific building features cannot be identified. Various sand traps can be identified on the golf course, and a pond is depicted on the southern portion of the Site and a tributary to East Creek is located in the western portion of the Site.	The Site vicinity primarily consists of residential-type structures.

Year	Description of Site	Description of Vicinity
1961-1964	No significant changes appear to be depicted on the 1961 and 1964 aerial image, however due to the image resolution, specific Site features cannot be identified. By the 1964 photograph, the East Creek tributary has been expanded into a long narrow pond similar to its current configuration.	Progressive increase in structure density depicted in the vicinity.
1974	A water hazard/pond has been added on the northeast side of the Site. Various changes to the sand traps/bunkers are depicted which appear to be associated with changes in design to the golf course.	Progressive increase in structure density depicted in the vicinity. Hommocks Middle School appears to have been constructed, to the west of the Site.
1984	The tennis courts appear to have been constructed and are depicted on the southern portion of the Site north of Cove Road. Some minor changes to the design of the golf course, including sand trap configuration is identified.	Progressive increase in structure density depicted in the vicinity. The previously undeveloped area to the northeast of the Site has been developed with residential properties.
1994	An additional pond/water hazard has been added to the northeast area of the Site.	Progressive increase in structure density depicted in the vicinity. Residential street development is depicted adjoining the Site to the northeast.
2006	The configuration of the ponds/water hazards on the golf course has been changed. A pond on the northeast side of the Site has been expanded, and two additional ponds have been added to the south side of the Site, to the east and west of the tennis courts.	Progressive increase in structure density depicted in the vicinity.
2009-2011	The golf course appears similar to its current configuration.	Progressive increase in structure density depicted in the vicinity.

4.5 <u>HISTORIC ATLAS REVIEW</u>

GZA requested historic Sanborn maps from EDR. GZA reviewed Sanborn Maps for the years 2003, 1996, 1995, 1994, 1992, 1988, 1963, 1950, 1942, 1934 and 1919. The table below contains GZA's description of the Site and vicinity properties as shown in the Sanborn Maps. Refer to **Appendix F** for the EDR Sanborn Report.

Year	Description of Site	Description of Vicinity
1919	The Site appears to be vacant land, utilized	The Site vicinity primarily consists of
	for agricultural use. The Site is depicted as	residential-type structures and agricultural
	"Meadow Land", and occupied by Pelanta	use land.
	Co. Inc., Hester B. Young., J.W. Crawford,	
	and Est. of Ella C. Howell. Prickley Pear Inlet	
	continued into the Site from Delancey Cove	
	to the west of the current clubhouse area.	

File No. 41.0162403.00

Page | 11

Year	Description of Site	Description of Vicinity
Year 1934	The country club appears to have been developed. The Site is identified as Larchmont Harbor Links Inc. Golf Course. The clubhouse, auto parking, and tennis courts appear on the south side of the Site. A structure identified as a caddy house is located to the north of the clubhouse. The clubhouse description includes the presence of a "laundry" and "drying room". An indoor swimming pool is located on the eastern side of the clubhouse. A shed is depicted on the north side of the Site in the vicinity of the current maintenance area. The Prickley	Progressive increase in structure density depicted in the vicinity. The Site vicinity is sparsely developed with residential properties.
1942	Pear Inlet has been partially filled, made into a pond, and separated from Delancey Cove. The Site is identified as Hommocks Country Club Golf Course. The clubhouse remains in a similar configuration to the 1934 drawing.	A progressive increase in development is depicted in the vicinity of the Site. Developments to the north, south, east and west of the Site appear to be primarily residential structures.
1950	The Site appears to be in a similar configuration to the 1942 Sanborn. The Site is now identified as Hampshire Country Club Golf Course.	A progressive increase in development is depicted in the vicinity of the Site.
1963	An expansion is depicted on the clubhouse building. A separate golf pro shop building is depicted on the 1963 Sanborn Map, just to the west of the clubhouse. A repair shop is depicted in the north "maintenance area" of the Site, to the west of the shed initially identified in the 1934 Sanborn Map.	Progressive increase in structure density depicted in the vicinity.
1988	Additions to the Site include the golf shop and golf cart shed buildings, added to the west and north of the clubhouse. A swimming pool has also been added to the west of the new golf pro shop. The maintenance shed shown on the 1934 Sanborn Map has been removed.	Progressive increase in structure density depicted in the vicinity. Hommocks Elementary School has been developed to the west of the Site.
1992-	The country club appears to be in a similar	Progressive increase in structure density
1996	configuration to the 1988 Sanborn Map.	depicted in the vicinity.
2003	The country club appears to be in its current configuration. The clubhouse, pool, tennis courts, and parking area is depicted on the south side of the Site.	Progressive increase in structure density depicted in the vicinity.

File No. 41.0162403.00

Page | 12

4.6 <u>TITLE SEARCH AND HISTORY OF OWNERSHIP</u>

As noted previously, no abstract of title was provided to GZA for review, and the completion of a title search was not included in the scope of this assessment. According to Daniel Pfeffer, the representative of the current owner, Hampshire Recreation, LLC, they purchased the property from Hampshire Country Club, Inc. in June 2010.

4.7 BUILDING DEPARTMENT RECORDS

Building permit reports were not reviewed for the Site. The environmental database did not have coverage for building permits at the Site, and building permits were not provided to GZA for review.

4.8 PROPERTY TAX FILES

GZA reviewed property tax data associated with the Site. The boundary line between the Village of Mamaroneck and the Town of Mamaroneck appears to pass through the western portions of the Site. The approximately 130-acre Site is known as Hampshire Country Club. The country club is identified by Section 9, and the following block and lot numbers:

Block 35: Lot 700, Block 36: Lot 1

Block 42: Lots 367, 568, 659

Block 43: Lots 1, 12

Page | 13

File No. 41.0162403.00

5.0 PREVIOUS SITE INVESTIGATIONS

GZA requested any available previous environmental investigations associated with the Site. The Client provided GZA with soil boring logs, dated July 2012 that were prepared by East Coast Geoservices, LLC (ECG). We also reviewed the Preliminary Geotechnical, prepared by GZA and dated March 18, 2016.

ECG Subsurface Investigation Boring Logs, dated July 2012

ECG performed six soil borings at the Site (identified as B-1 through B-6). Groundwater was encountered at borings B-1 through B-3 at 5 feet bgs. Groundwater was encountered at B-4 10 feet bgs and B-6 and 15 feet bgs. Groundwater was not encountered at B-5. The borings ranged in depth from 6 feet bgs (due to refusal) to 17 feet bgs (due to refusal). Drilling refusal was assumed to be top of bedrock; however, no rock coring was performed by ECG. No environmental observations were noted on the boring logs.

Preliminary Geotechnical Engineering Report, prepared by GZA, dated March 18, 2016

GZA performed a geotechnical investigation at the Site and prepared a Preliminary Geotechnical Engineering Report, dated March 18, 2016. The geotechnical investigation consisted of six test borings (designated GZ-1 through GZ-6), drilled by Soil Testing, Inc. of Oxford, Connecticut, on February 29th and March 1, 2016 using hollow-stem auger drilling techniques. Depth to bedrock based on drilling refusal was encountered between three to 17.5 feet bgs. Bedrock was cored at one location (GZ-2). The report evaluated subsurface conditions at the Site and provided preliminary geotechnical design and construction recommendations for proposed redevelopment at the Site.

File No. 41.0162403.00 Page | 14

6.0 SITE RECONNAISSANCE

The purpose of GZA's Site reconnaissance was to make surficial observations for evidence of recognized environmental conditions that could result in the presence of oil or hazardous materials in the environment. GZA Assistant Project Manager Rahul Bhatia visited the Site on February 23, 2016. Mr. Scott Olson, Golf Course Superintendent, accompanied GZA during the Site reconnaissance. GZA photo-documented pertinent features or areas of environmental concern, and our observations are documented within the Report. Selected photographs are included in **Appendix B**, and **Figure 2**, Site Plan, depicts pertinent Site features. A summary of each area assessed is presented in the following sections.

6.1 EXTERIOR OBSERVATIONS

The periphery of the Site and portions of the property not occupied by structures were visually assessed for recognized environmental conditions.

Exterior portions of the Site consisted of the golf course, tennis courts area, maintenance area, pool area, paved parking areas with landscaped islands, and perimeter sidewalks.

6.1.1 <u>Underground Storage Tanks</u>

No surficial evidence of underground storage tanks (UST) (i.e., fill ports, vent pipes, pavement repairs, etc.) was observed during the exterior Site reconnaissance. Mr. Olson indicated that he was not aware of USTs at the Site.

6.1.2 Aboveground Storage Tanks

GZA observed three ASTs in the maintenance and workshop building area, located in the northern portion of the Site. Tank 1 is an in-service 1,000-gallon gasoline tank, situated on struts on a concrete pad. The tank is labeled "Tank # 1". The Tank 1 is utilized for on-Site vehicles, including golf carts and food vendor carts. In the same general area as Tank 1, is a 500-gallon diesel tank labeled as labeled "Tank # 2." Tank 2 is built with metal struts on a concrete pad. Tank 3 is located in the maintenance and workshop building on the Site, and is a 275-gallon No. 2 fuel oil tank. Tank 3 stores fuel for heating the maintenance and workshop building. The ASTs are registered with the State (see **Section 8.2**). No signs of cracks, leaks or holes were observed in the ASTs, and staining was not observed in the vicinity of the tanks.

6.1.3 Hazardous Substances or Petroleum Products Use

With the exception of the ASTs, no evidence of chemicals, hazardous substances, or petroleum products was observed on the exterior portions of the Site.

6.1.4 Staining

No surficial staining (other than typical parking lot staining) was observed; however, observations were limited due to the presence of parked cars.

File No. 41.0162403.00

Page | 15

6.1.5 <u>Electrical Transformers/Equipment</u>

GZA observed two pad-mounted transformers on the Site. The transformers were located near the southern and northern sides of the on-Site golf course. GZA did not observe surficial staining at either transformer location.

6.1.6 <u>Drywells and Sumps</u>

No surficial evidence of exterior drywells or sumps was observed during GZA's Site reconnaissance.

6.1.7 Pits, Ponds, and Lagoons

GZA observed six ponds located throughout the golf course at the Site. Water level in one of the ponds, located in the northeast area of the Site, is regulated by two on-Site water wells. The water from the wells is pumped to the pond, and subsequently pumped to an irrigation shed located adjacent to the pond. The well/pond water is then pumped to the various sprinkler and irrigation systems throughout the golf course.

6.1.8 <u>Wells</u>

Two active water supply wells were observed on the northeastern portion of the Site. According to Mr. Olson, the wells are approximately 350-feet deep, and each contains a 50-gallons-per-minute submersible pump. The wells are used to regulate the water level in a nearby pond and provide irrigation water for the golf course.

6.1.9 Solid Waste

GZA observed several solid waste dumpsters in the maintenance area of the golf course. GZA did not observe significant staining in the area of the dumpsters.

6.1.10 Process Wastewater

No surficial evidence of the on-Site disposal of process wastewater was observed.

6.1.11 Septic System

GZA observed evidence of three on-Site septic systems at the Site. The northern-most septic tank is located near the maintenance area of the Site, and is connected to the maintenance and workshop building. A second septic system is located to the south and west of the maintenance area, and is associated with a comfort station/restroom located on the golf course. The third septic tank is located on the south side of the Site, and is associated with the tennis court pavilion.

6.1.12 <u>Stressed Vegetation</u>

No stressed vegetation was observed on the Site.

6.1.13 Soil/Water Sampling

No subsurface explorations or chemical analyses have been included as part of GZA's scope of services. Information regarding subsurface conditions can be obtained by traditional subsurface exploration techniques and the collection and chemical analysis of soil and water samples.

File No. 41.0162403.00

Page | 16

6.1.14 Oil/Water Separators

No surficial evidence of oil/water separators was observed at the Site.

6.1.15 Surface Water Runoff

Surface water is generally directed either to on-Site drainage systems. The majority of storm water is anticipated to infiltrate on Site. The remainder of the storm water collects in on-Site ponds, or storm water catch basins, which are reportedly discharge to the municipal storm water system.

6.1.16 <u>Hydraulic Equipment and Lifts</u>

No hydraulic equipment was observed on the exterior portion of the Site.

6.1.17 Other Observations

No other significant exterior observations were made.

6.2 INTERIOR OBSERVATIONS

The interior of the Site, including occupied areas and storage areas, was visually assessed for evidence of recognized environmental conditions. The conditions observed are presented below.

6.2.1 Construction

The Site buildings consisted of the primary clubhouse, tennis pavilion, comfort station/restroom, swimming pool maintenance building, golf pro shop, maintenance equipment storage shed, chemical storage shed, caddy headquarters/golf cart storage garage building, equipment storage building, and the maintenance and workshop building.

The primary clubhouse building has undergone several renovation since its initial construction prior to 1934.

6.2.2 Heating and Cooling

Heating and cooling to the primary clubhouse is provided by electric air conditioning units and a natural gas fueled boiler. The tennis pavilion building is not serviced by heating and cooling units. The maintenance and workshop building is serviced by a 275-gallon #2 fuel oil AST.

During a prior renovation, the primary clubhouse was likely converted to natural gas from either coal or oil heating. However, GZA did not observe an evidences of oil tanks associated with the current building.

6.2.3 Current Site Use

The Site is currently utilized as a private country club, consisting of a golf course, tennis courts, maintenance area and associated buildings.

File No. 41.0162403.00 Page | 17

6.2.4 Chemical Use and Storage Areas

Pool chemicals were stored in a dedicated building adjacent to the primary pool, and consisted of muriatic acid and calcium chloride flakes. Laundry-related chemicals were stored in the primary clubhouse area, and consisted of various detergents and fabric chemicals.

A chemical storage area containing pool chemicals, including muriatic acid and calcium chloride flakes were observed adjacent to the pool on the south side of the Site. Additionally, a chemical storage shed containing various herbicides, pesticides, and fungicides observed in the northern maintenance area of the Site. The chemicals were stored on an open grate situated over a steel floor. No floor drains were observed in the chemical storage shed. The shed housed chemicals including:

- Glysophate Plus Herbicide
- Quinclorac Liquid Herbicide
- Chipco Signature Fungicide
- Revolution Fertilizer Substitute
- Dimension Ultra 40 WP Herbicide
- Banol Fungicide
- Tenacity Herbicide
- Chipco Flo Fungicide
- Seed Research 1150 Bentgrass
- T-Nex Turf Management Product
- Miscellaneous Grass Seed Blend Products
- Various household cleaning supplies

The maintenance and workshop building contained various paints and primers utilized for vehicle maintenance. The maintenance and workshop building also contained two 55-gallon drums of motor oil. A third 55-gallon drum was used for the storage of used oil. When the used oil drum is filled, the petroleum supplier picks up the drum and reportedly transports it for recycling.

6.2.5 Hazardous Wastes Generated and Waste Storage Areas

According to the Site contacts, hazardous wastes are not generated by activities at the Site.

6.2.6 Stains or Corrosion

No significant staining was observed.

6.2.7 Floor Drains or Sumps

GZA observed a floor drain near the laundry equipment located in the basement of the primary clubhouse. The floor drain is believed to be connected to the sanitary sewer system.

6.2.8 Hydraulic Lifts and Elevators

Hydraulic elevators were not observed during the Site reconnaissance.

File No. 41.0162403.00

Page | 18

6.2.9 Other Interior Observations

Structures at the Site consisted of the primary clubhouse, tennis pavilion, comfort station/restroom, swimming pool maintenance building, golf pro shop, equipment storage shed, chemical storage shed, golf cart storage building, equipment storage building, and the maintenance and workshop building.

The primary clubhouse is subdivided into dining areas, bars, locker rooms, laundry areas, and mechanical rooms. The tennis pavilion is utilized for the storage of tennis equipment and locker rooms. The maintenance and workshop areas are used for the maintenance of on-Site equipment, including golf carts and heavy landscaping equipment. The workshop contains several storage areas for miscellaneous hand tools, auto repair equipment, lawnmowers (push and riding), air compressors, a grinding machine, and golf carts.

The golf cart storage building stores the on-Site golf carts. Two of the golf carts (used by the maintenance staff) are gasoline operated, with the remainder being electric carts for members.

File No. 41.0162403.00 Page | 19

7.0 VICINITY RECONNAISSANCE

As part of GZA's Site assessment, a reconnaissance of the properties adjoining the Site, as well as the vicinity within a ¼-mile radius of the Site, was conducted from public properties. The results of GZA's vicinity reconnaissance are presented below.

7.1 ADJOINING PROPERTIES

GZA did not observe evidence of environmental concerns on the other adjoining properties. A review of the environmental database identified AST and UST sites in the vicinity of and adjoining the Site, primarily associated with home heating oil tanks. However, the mere presence of ASTs and USTs does not constitute an environmental concern. Small quantities of hazardous materials may be used at the Hommocks Middle School located to the west of the Site across Hommocks Road. Refer to **Section 2.4** for a listing of adjoining properties.

7.2 <u>VICINITY PROPERTIES AND USE</u>

The area within ¼-mile radius of the Site is primarily residential. GZA did not observe evidence of hazardous materials storage other than fuel oil use in the Site vicinity. Two drycleaners and some other commercial facilities are located along Boston Post Road. One (Excelsior Cleaners) is located at 1320 Boston Post Road west of the Site in GZA's opinion this property is not upgradient; and therefore, not a concern to the Site. The other drycleaner (Carriage Drycleaners Inc.) is located north of the Site at 1204 Boston Post Road. Further to the east is an auto repair facility (Elko Auto Repair is located at 1139 West Boston Post Road). Although not directly adjacent to the Site, both of these properties appear to be less than 1,000 feet upgradient. We note that neither the auto repair facility nor the upgradient drycleaner have violations listed in the environmental database in discussed in **Section 8.0**; and therefore, GZA does not consider them an environmental concern to the Site.

File No. 41.0162403.00 Page | 20

8.0 REGULATORY DATABASE REVIEW

The following section is based on public information obtained from various federal, state, and local agencies that maintain environmental regulatory databases. These databases provide information about the regulatory status of a property and incidents involving the use, storage, spillage, or transportation of oil or hazardous materials. Information was obtained by GZA personnel and by EDR (a professional data search company) on January 13, 2016. Federal, state, and local regulatory information is presented in **Appendix G**. A discussion of the reviewed information is presented in the following sections.

8.1 FEDERAL AGENCY DATABASES

Nine federal databases were provided by EDR and reviewed by GZA. These reports and the search distances used to review these databases are presented below.

Database	Radius Searched	Hits Within Radius Searched
National Priorities List (NPL)	1 Mile	0
Delisted NPL	½ Mile	0
The NPL, or Superfund sites list, is EPA's database of confirmed		
uncontrolled or abandoned hazardous waste sites identified for		
priority remedial actions under the Superfund program.		
Comprehensive Environmental Response, Compensation, and	½ Mile	0
Liability Information System (CERCLIS)		
The CERCLIS database is a compilation by EPA of the sites that		
EPA has investigated or is currently investigating for a release		
or threatened release of hazardous substances.		
CERCLIS No Further Remedial Action Planned (NFRAP)	½ Mile	0
The CERCLIS NFRAP database is EPA's list of sites that an		
assessment has been completed and no further steps will be		
taken to list this Site on EPA's National Priority List.		
Resource Conservation and Recovery Act (RCRA) Generator	Site and	1
Database	adjoining	
EPA's RCRA program identifies hazardous waste generators and	properties	
tracks hazardous waste from the point of generation to the		
point of disposal.		
RCRA Treatment, Storage and Disposal (TSD) Facility Database	½ Mile	0
The RCRA TSD Facilities database is a compilation by EPA of		
reporting facilities that store, treat, or dispose of hazardous		
waste.		
RCRA Corrective Action Database (CORRACTS)	1 Mile	0
The RCRA CORRACTS list is EPA's list of treatment, storage, or		
disposal facilities subject to corrective action under RCRA.		

Database	Radius Searched	Hits Within Radius Searched
Emergency Response Notification System (ERNS) The ERNS list is a national database used to collect information on reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, U.S. Coast Guard, National Response Center, and Department of Transportation.	Site only	0
Federal Institutional/Engineering Controls Registries The USEPA maintains a list of sites with engineering and institutional controls in place. Engineering controls include caps, vapor barriers, and fences to eliminate contamination pathways. Institutional controls are administrative measures that often involve deed restrictions.	Site Only	0

The Site was not identified on the Federal Agency Databases. No NPL, ERNS, or Federal Institutional Controls records were identified within their prescribed search radii.

8.1.1 RCRA GENERATOR DATABASE

The RCRA Generator database lists Hommocks Middle School, which adjoins the Site to the west, across Hommocks Road. The school was identified as a conditionally exempt small quantity generator (CESQG). CESQG facilities generate less than 100kg of hazardous waste, or less than 1kg of acutely hazardous waste each month. Hommocks Middle School was also identified in the several databases discussed in **Section 8.2**. No violations were identified in these databases, and the mere presence of this facility on these databases does not constitute an environmental condition. As such, this record is not anticipated to be a concern to the Site.

8.2 STATE AGENCY DATABASE REVIEW

Ten state databases were provided by EDR and reviewed by GZA. These reports and the search distances used to review these databases are presented in the table below.

Database	Radius Searched	Hits Within Radius Searched
State and Tribal List of Hazardous Waste Sites (SHWS)	½ Mile	0
The State List of Hazardous Waste Sites includes uncontrolled		
and unregulated hazardous waste sites.		
State and Tribal List of Active Landfills The State List of Active Landfills is compiled by NYSDEC and is a list of active solid waste landfills and transfer stations located within New York	½ Mile	0

File No. 41.0162403.00

Page | 22

Database	Radius Searched	Hits Within Radius Searched
State and Tribal Institutional Control Registry	Site	0
The State and Tribal Institution Control Registry is a database of		
sites with a land use restriction.		
Leaking Underground Storage Tanks (LUST)	½ Mile	75
The State list of LUSTs is maintained by NYSDEC Regional		
Offices. Sites with Incident Numbers are listed in this database.		
NY Spills	1/8 Mile	16
State and Tribal Engineering Control Registry	Site	0
NY UST and AST	¼ Mile	8 UST / 5 AST
Underground Storage Tanks and Aboveground Storage Tanks		
listings		
State and Tribal Brownfield Sites	½ Mile	0
The Brownfields Projects Inventory is a database maintained by		
NYSDEC of underused, idled, or abandoned property with		
perceived or actual environmental contamination.		

The Site was identified in the NY AST, NY Spills and LTANKS database as discussed below.

The Site was identified in the NY AST database. The Site has a NYSDEC Petroleum Bulk Storage (PBS) Site ID of 3-801927, and the PBS status is active. The Site is listed has having three ASTs, which correspond to the three tanks identified during the Site reconnaissance (see **Section 6.1.2**). Tank 1 is identified as an in-service 1,000-gallon AST. The product stored is listed as Gasoline/Ethanol, and the installation date is listed as February 1, 1998. Tank 2 is identified as an in-service 500-gallon AST. The product stored is listed as diesel, and the installation date is listed as March 1, 1998. Tank 3 is identified as an in-service 275-gallon AST. The product stored is No. 2 fuel oil, and the installation date is February 1, 1998.

The Site is identified in the NY LTANKS database. The listing is identified with a "tank failure", and was reported on June 11, 1999. NYSDEC Spill Case No. 9902831 was subsequently assigned. A review of the NYSDEC spill database indicates that the spill was associated with an unknown quantity of No. 2 fuel oil. NYSDEC notes state that the spill is associated with holes that were discovered in a tank, and that the tank was removed and soil cleanup was performed. The EDR database notes that the NYSDEC remarks also indicate no further action was recommended after the soil cleanup and tank removal. The database records do not report whether the tank involved was an AST or UST. Additional file reviews where requested for these records (see **Section 8.4**, below). The spill was closed on August 2, 1999. The closed spill case closure is considered to be an HREC due to changes in regulatory practices since 1999.

The Site listing in the NY SPILLS database appears to be associated with gasoline spilled as a result of tank failure, and was reported on May 26, 1999. NYSDEC Spill Case No. 9902193 was subsequently assigned. A review of the NYSDEC spill database indicates the spill is associated with an unknown quantity of gasoline. Similarly to the spill identified in the LTANKS database, NYSDEC remarks indicate no further action recommended after the tank and impacted soil were removed. The NYSDEC notes also indicate that the spill cause was associated with holes found in a "pipeline". The database records do not report whether the tank involved was an AST or UST. Additional file

File No. 41.0162403.00

Page | 23

reviews where requested for these records (see **Section 8.4**, below). The spill was closed on August 2, 1999. The closed spill case closure is considered to be an HREC due to changes in regulatory practices since 1999.

8.2.1 LTANKS

The database identified 75 LTANKS records within 0.5 miles of the target property. One of these records is the target property, and is discussed in the previous NY SPILLS subsection. The majority of the remaining LTANK records appear to be associated with private residences located in the vicinity of the Site. Additionally, all the spill cases within 1/8 mile of the Site have been closed. These LTANK cases are not anticipated is not anticipated to be a concern to the Site.

8.2.2 NY SPILLS

The database identified 16 NY SPILLS cases within 0.125 miles of the target property. Of these 16 NY SPILLS cases, 15 have been closed. The open spill case is a residential property located at 521 Orienta Avenue, located to the northeast of the Site on an adjoining property. The 521 Orienta spill is associated with an unknown quantity of No. 2 fuel oil. NYSDEC notes that the tank was reportedly located inside of a house foundation. The spill occurred on November 8, 2011, and NYSDEC notes indicate a cleanup was underway. The cleanup was reportedly halted in 2015 due to the owner removing the soil remediation contractor from the project. NYSDEC notes indicate groundwater was not impacted by the spill, and as such, this spill is not anticipated to be a concern to the Site.

8.2.3 NY UST/AST

The database identified eight UST records and five AST records within ¼ of the target property. One of the AST records identified in the database is the target property (as discussed above). The Elko Auto Repair that was identified in **Section 7.2**, is listed in both the UST and AST databases. However, no violations are listed in the databases for the auto repair facility. The mere presence of UST and AST database does not constitute an environmental concern. Reported releases, leaks or spills from these tanks are identified in the appropriate LTANKS or NY SPILLS databases.

8.2.4 NY DRYCLEANERS

The NY DRYCLEANERS database identified two drycleaners within 0.25 miles of the target property. Excelsion Cleaners is located approximately 0.12 miles to the west of the Site, which is not anticipated to be directly upgradient of the Site. This facility was also identified in the RCRA Small Quantity Generators, US-AIRS, FINDS, RI MANIFEST, NY MANIFEST, and ECHO databases. No violations have been reported for this drycleaner, and as such it is not anticipated to be a concern to the Site.

The second dry cleaner, Carriage Cleaners, is also located on 1204 Boston Post Road approximately 1/8-mile north of the Site and is considered upgradient of the property. This drycleaner was identified in two other databases, but no violations have been reported. This drycleaner is not anticipated to be a concern to the Site.

8.3 LOCAL REGULATORY AGENCIES

To obtain information concerning the possible release of hazardous material or oil at or near the Site, GZA contacted and reviewed information available online from the following agencies:

File No. 41.0162403.00 Page | 24

- Village of Mamaroneck Department of Public Records
- Town of Mamaroneck Office of the Town Clerk

Pertinent Site information was reviewed, and the information was incorporated into this Report.

8.4 <u>STATE AGENCY FILE REVIEW</u>

New York State Department of Environmental Conservation: Freedom of Information Law (FOIL) Request was sent on February 22, 2016. GZA has not yet received responses to our FOIL request. Pertinent documents will be forwarded to the Client upon receipt.

File No. 41.0162403.00

Page | 25

9.0 INTERVIEWS AND REFERENCES

9.1 <u>INTERVIEWS</u>

GZA either interviewed or contacted the following individuals as part of this Report:

- Scott Olson Hampshire Country Club Golf Course Superintendent
- Daniel Pfeffer Hampshire Recreation, LLC

9.2 REFERENCES

GZA reviewed the following references as part of this Phase I Environmental Site Assessment.

- ASTM International's Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process (ASTM E1527-13)
- Village of Mamaroneck Department of Public Records Assessors Information
- Town of Mamaroneck Office of the Town Clerk Assessors Cards
- Environmental Data Resources, Inc., Inquiry No. 4546842.2s dated February 24, 2016. The EDR Radius Map Report with GeoCheck.
- Geologic Map of the Mamaroneck 7.5 Minute USGS Quadrangle, Mamaroneck, New York
- Preliminary Geotechnical Engineering Report, dated March 18, 2016, prepared by GZA
- Soil Boring Logs, prepared by ECG, dated July 2012

Information provided by these references is discussed within the text of this Report.

File No. 41.0162403.00 Page | 26

10.0 USER RESPONSIBILITIES

GZA requested information from the Client regarding title information, environmental liens, Activity and Use Limitations, and specialized knowledge or commonly known information regarding the Site and, if applicable, the reason for a discount in the purchase price. The User Questionnaire indicates that the property has been a golf course for almost 100 years. The User Questionnaire also identifies pesticide usage at the Site as part of golf course maintenance. The A copy of the User Questionnaire filled out by a representative of the current Site owner is attached as **Appendix H**.

File No. 41.0162403.00 Page | 27

11.0 FINDINGS AND CONCLUSIONS

11.1 FINDINGS

A Phase I Environmental Site Assessment following the general guidance of ASTM E1527-13 has been conducted at the Hampshire Country Club in Mamaroneck, New York. The study included a Site reconnaissance; a review of Site history; a review of selected local, state, and federal regulatory records; and interviews with persons and agencies familiar with the Site. No subsurface exploration or chemical testing of soil or groundwater was conducted, and no assessment for the presence of lead hazards, radon, or asbestos was completed.

The findings below are based on the work conducted as part of this assessment:

- The approximately 130-acre Site is known as Hampshire Country Club, and is located at 1025 Cove Road in Mamaroneck, New York. The Site is bounded by Delancey Cove to the south and residential neighborhoods to the north, west, and east.
- At the time of GZA's visit, the study Site was occupied by Hampshire Country Club, a private club consisting of
 a golf course, seven tennis courts, and associated buildings. The Site buildings consisted of the primary
 clubhouse, tennis pavilion, comfort station/restroom, swimming pool maintenance building, golf pro shop,
 equipment storage shed, chemical storage shed, caddy headquarters/golf cart storage building, equipment
 storage building, and the maintenance and workshop building.
- The area surrounding the Site is generally used for residential purposes. Hommocks Middle School adjoins the Site to the east. Commercial properties, include restaurants, diners, grocery stores, and a motel are located along Boston Post Road, which is located to the north of the Site, past Fairway Green and Old Boston Post Road. Mamaroneck High School is also located along West Boston Post Road. Elko Auto Repair is located at 1139 West Boston Post Road, approximately 700 feet to the north of the Site.
- Historically, the Site has been a country club and golf course since at least 1934. A review of the historical
 Sanborn maps indicates that prior to 1934, the Site and the general vicinity consisted of vacant land utilized
 for agricultural purposes. A review of the historical topographic maps indicates that during the development
 of the country club, coastal marshland and waterways that were present on the Site was backfilled. The
 source of the fill material is unknown.
- GZA observed three AST in the maintenance and workshop building area, located in the northeast area of the
 Site: Tank 1 is an in-service 1,000-gallon gasoline; Tank 2 is an in-service 500-gallon diesel tank; and Tank 3 is
 an in-service 275-gallon No. 2 fuel oil tank located in the maintenance and workshop building on the Site. No
 visual evidence of release was associated with these three ASTs.
- GZA observed evidence of three on-Site septic systems at the Site. The northern-most septic tank is located
 near the maintenance area of the Site, and is utilized for the maintenance and workshop buildings. A second
 septic system is located to the south and west of the maintenance area, and is associated with a comfort
 station/restroom located on the golf course. The third septic tank is located on the south side of the Site, and
 is associated with the tennis court pavilion.

File No. 41.0162403.00 Page | 28

- Chemical storage at the Site included pool chemicals, which were stored in a dedicated building adjacent to
 the primary pool, and consisted of muriatic acid and calcium chloride flakes. Laundry-related detergents and
 household cleaning chemicals were stored in the primary clubhouse area.
- A chemical storage shed containing various herbicides, pesticides, and fungicides observed in the northern
 maintenance area of the Site. No visual evidence of release was observed from the current chemical storage
 shed. As part of routine maintenance of the golf course, the use of herbicides and pesticides at the Site is
 anticipated for at least the past 40 years.
- There are two pad-mounted transformers on the Site. The transformers were located near the southern and northern sides of the on-Site golf course. GZA did not observe surficial staining at either transformer location.
- There are two active water supply wells located in the northeastern portion of the Site. The wells are used to regulate the water level in a golf course pond and provide irrigation water for the golf course.
- The Site is identified in the NY LTANKS database. The listing is identified with a "tank failure", and was reported on June 11, 1999. NYSDEC Spill Case No. 9902831 was subsequently assigned. The spill was closed on August 2, 1999 with no further action recommended.
- The Site is identified in the NY SPILLS database. Spill Case No. 9902193 is associated with a tank failure, reported on May 26, 1999 for an unknown quantity of gasoline. The spill was also closed on August 2, 1999 with no further action recommended.
- GZA did not identify any upgradient offsite environmental concerns, which are anticipated to affect the subsurface conditions at the Site.
- GZA requested information from the Client regarding title information, environmental liens, Activity and Use
 Limitations, and specialized knowledge or commonly known information regarding the Site and, if applicable,
 the reason for a significantly discounted purchase price. According to the Questionnaire, the User was not
 aware of environmental liens or activity and use limitations. Information requested in the questionnaire and
 provided was summarized in this Report.

11.2 CONCLUSIONS AND OPINIONS

Based on the findings, we have identified the following data gaps in connection with the completion of the Phase I Environmental Site Assessment.

- The history of pesticide and herbicide use at the Site for maintenance of the golf course, the absence of
 quantitative soil quality data at the Site is considered a data gap, and may alter the opinion of this Report, if
 not answered.
- The historic raising of the Site grade with fill material of unknown environmental quality is a data gap that may alter the opinion of this Report, if not answered. Although, not an ASTM consideration, we also note that the historic filling of wetlands has the potential to generate methane gas at the Site.
- The unknown environmental quality of the groundwater withdrawn from the water supply wells and used for
 irrigation is a data gap that may alter the opinion of this Report, if not answered.

File No. 41.0162403.00

Page | 29

Unable to review of the NYSDEC files based on our FOIL regarding the closed on-site spill cases is a data gap.
 Details in these files may alter the findings and opinions of this Report.

Based on the findings, conclude the follow as conducted as part of this assessment:

- The history of equipment maintenance within a building attached to a septic system is considered a REC.
- The Site is identified in the NY LTANKS database and NY SPILLS databases. Both spills cases were closed on August 2, 1999. However, these closed spills represent HRECs due to changes the regulatory practices since 1999.

Based on the findings presented above, it is GZA's opinion that we have performed a Phase I Environmental Site Assessment in general conformance with the scope and limitations of ASTM E1527-13 of the property identified as the Hampshire Country Club in Mamaroneck, New York. Any exceptions to, or deletions from, this practice are described in **Section 1.0** of this Report.

File No. 41.0162403.00

12.0 ENVIRONMENTAL PROFESSIONAL OPINION

I declare, to the best of my professional knowledge and belief, that I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 12; that I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property; and that I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312. The signature of the Environmental Professional John M. Gavras is contained on the cover letter of this Report. Environmental Professional Qualifications are attached as **Appendix I**.

Phase I Environmental Site Assessment – Hampshire Country Club File No. 41.0162403.00

13.0 LIMITATIONS

GZA prepared this Report on behalf of, and for the exclusive use of VHB for the stated purpose(s) and location(s) identified in the Report may be conveyed to the lender associated with the proximate purchase of the subject location(s) to the extent set forth in our signed proposal dated February 2, 2016

Use of this Report, in whole or in part, at other locations, or for other purposes, may lead to inappropriate conclusions, and we do not accept any responsibility for the consequences of such use(s). Further, reliance by any party not identified in the agreement, for any use, shall be at that party's sole risk, and without any liability to GZA.

Our findings and conclusions are based on the work conducted as part of the Scope of Services set forth in this Report, and reflect our professional judgment. These findings and conclusions must be considered not as scientific or engineering certainties, but rather as our professional opinions concerning the limited data gathered during the course of our work. Conditions other than those described in this Report may be encountered at the subject location(s).

Our services were performed using that degree of skill and care ordinarily exercised by qualified professionals performing the same type of services, at the same time, under similar conditions, at the same or a similar property. No warranty, expressed or implied, is made.

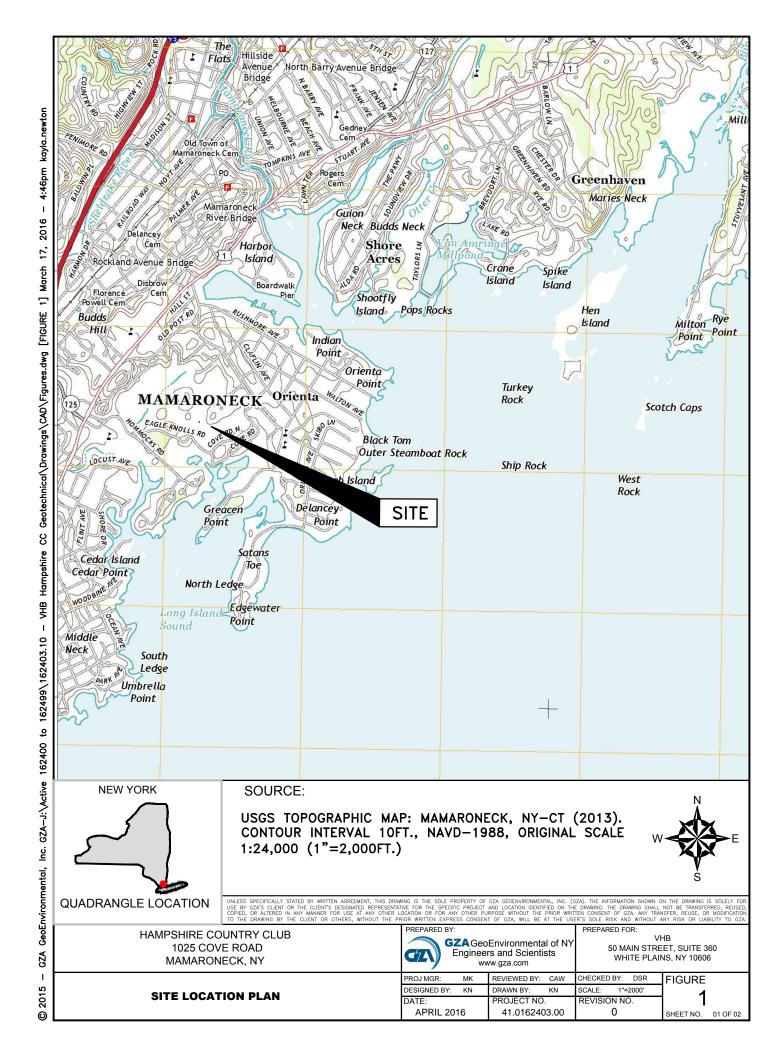

This Report is also subject to the specific limitations contained in **Appendix A**.

APPENDIX A

PHASE I ENVIRONMENTAL SITE ASSESSMENT LIMITATIONS AND TERMS & CONDITIONS

Proactive by Design

ATTACHMENT C

Vanasse Hangen Brustlin, Inc. MODIFIED SUBCONSULTANT TERMS AND CONDITIONS

The engagement of GZA GeoEnvironmental of New York, (SUBCONSULTANT) by Vanasse Hangen Brustlin, Inc. (VHB) is subject to the following terms and conditions which are an integral part of the collective agreement between SUBCONSULTANT and VHB.

- By entering into this agreement SUBCONSULTANT represents that it is willing and qualified
 to provide the professional services herein described (the "Services"). SUBCONSULTANT
 recognizes that the services of VHB and others involved in the Project are dependent upon
 the timely performance of SUBCONSULTANT'S Services.
- 2. It is understood and agreed that SUBCONSULTANT shall perform all services under this agreement as an independent contractor and nothing contained herein shall be construed to be inconsistent with this relationship or status. SUBCONSULTANT shall be solely responsible for the methods and means used in performing the professional services herein described, and is neither an employee or agent of, nor a joint venturer with, VHB.
- SUBCONSULTANT is not responsible for the acts or omissions of contractors or others at the site, except for its own subcontractors and employees. SUBCONSULTANT will not supervise, direct or have control over or the authority to stop any contractor's work, nor shall SUBCONSULTANT's professional activities nor the presence of SUBCONSULTANT or its employees and subcontractors be construed to imply that SUBCONSULTANT has authority over or responsibility for the means, methods, techniques, sequences or procedures of construction, for work site health or safety precautions or programs, or for any failure of contractors to comply with contracts, plans, specifications or laws. Any opinions by SUBCONSULTANT of probable costs of labor, materials, equipment or services to be furnished by others are strictly estimates and are not a guaranty that actual costs will be consistent with the estimates.
- 3. All services and work set forth in this agreement shall commence upon receipt of a signed contract by VHB and a written notice to proceed issued to SUBCONSULTANT, and executed by both VHB and SUBCONSULTANT.
- 4. Requests for additional services not described herein as part of the Services must be made and authorized in writing prior to commencement of any work related to such additional services. Should SUBCONSULTANT perform said services without prior authorization, SUBCONSULTANT will not be entitled to receive any additional compensation therefor.
- 5. Invoices may be submitted by SUBCONSULTANT not more than once monthly. VHB will submit SUBCONSULTANT'S invoice together with its invoice to the Client on VHB's regularly scheduled invoicing cycle. VHB will pay each invoice received from SUBCONSULTANT within 15 days of receipt of payment from VHB's Client. In case of partial payment by VHB's Client, SUBCONSULTANT shall be paid proportionately. VHB reserves the right to defer or refuse to pay any invoice or payment, or part thereof, if in its opinion, the amount submitted

Proactive by Design

is not in reasonable proportion to the percentage of services completed by SUBCONSULTANT. Invoices shall be submitted in a format acceptable to VHB and its Client.

Final payment to SUBCONSULTANT for the Services, and acceptance of the payment by SUBCONSULTANT upon completion or termination of this agreement, shall release and forever discharge VHB from all claims, demands, and liabilities of every nature relating to payment for SUBCONSULTANT'S Services.

SUBCONSULTANT shall keep records on a generally recognized accounting basis of its personnel time and expense, and any other expenses incurred by SUBCONSULTANT in connection with the performance of Services for this project. These records shall be available to VHB or its authorized representative at reasonable times.

- 6. SUBCONSULTANT agrees to provide at its own expense the following minimum insurance coverage, for the duration of this Agreement:
 - a. Workmen's compensation and employee's liability insurance in accordance with statutory limits.
 - b. Comprehensive general liability insurance including products completed, contractual, property and personal injury coverage with \$1,000,000 for each occurrence and aggregate amount. Coverage must also include XCU when applicable.
 - c. Comprehensive Automobile liability insurance including non-owned and hired autos with a combined single limit of \$1,000,000 and \$1,000,000 aggregate for bodily injury, including death, and property damage.
 - d. Valuable papers insurance coverage for not less than the greater of Consultant's fees or \$100,000 for the restoration of plans, drawings, computations or similar data prepared as part of this agreement.
 - e. Excess liability coverage, umbrella form, in an amount not less than \$2,000,000.
 - f. Professional liability insurance for negligent acts, errors or omissions of SUBCONSULTANT made in connection with the performance of Services for this project, in the amount of \$1,000,000 per claim and aggregate amount. Such insurance must be maintained in force for three (3) years following acceptance of all work under this agreement
 - g. VHB and its Client shall be named as "additional insured" on all policies except Worker's Compensation and Professional Liability insurance.

SUBCONSULTANT shall provide VHB with a certificate of insurance as evidence of the above described coverage prior to commencing Services under this agreement. Such Certificate shall clearly identify the specific project for which the certificate is being issued and SUBCONSULTANT shall provide a minimum of thirty (30) days written notice before coverage can be cancelled or materially changed.

7. INTENTIONALLY OMITTED.

Page | 14

Proactive by Design

- 8. SUBCONSULTANT shall indemnify and hold harmless VHB, its client, and their officers, agents and employees from suits, actions, legal proceedings, claims, damages, liabilities, costs and expenses, including reasonable attorney's fees arising out of any claims, damages, personal injuries, property losses, and/or economic or other damages sustained by or alleged to have been sustained by any person or entity, to the extent caused by the negligent acts, errors or omissions of SUBCONSULTANT, its agents, employees or subcontractors in connection with the performance of Services for this project.
- g. SUBCONSULTANT shall be responsible for the quality, technical accuracy and coordination of all designs, drawings, specifications, reports and all other services furnished by SUBCONSULTANT under this agreement. SUBCONSULTANT shall, without additional compensation, correct or revise any errors or deficiencies in its designs, drawings, specifications and other services performed by SUBCONSULTANT in connection with its performance of the Services.
- SUBCONSULTANT'S services will be conducted in a manner consistent with that level of care or skill ordinarily exercised by members of the same profession currently practicing in the same locality under similar conditions, as well as compliance with any applicable Federal or state law or regulations.

Neither VHB's review, approval or acceptance of, nor payment for, any of the Services required under this agreement shall be construed to operate as a waiver of any rights under this agreement or of any cause of action arising out of performance of Services of this agreement; and SUBCONSULTANT shall be and remain liable to VHB in accordance with applicable law for all damages to VHB caused by SUBCONSULTANT'S performance of the Services furnished under this agreement.

10. VHB may terminate this agreement at any time by giving SUBCONSULTANT ten (10) days prior written notice. In the event that VHB's contract with its Client is terminated, this agreement shall simultaneously terminate. In the event of termination, SUBCONSULTANT shall receive compensation for Services satisfactorily performed and accepted by VHB to the date of termination. In no case shall SUBCONSULTANT be entitled to make a claim for lost profits or damages in the event of termination.

VHB shall have the right to suspend all or any part of the Services at any time and for any reason by written notice to SUBCONSULTANT. SUBCONSULTANT shall have the right to terminate the agreement upon ten days prior written notice to VHB only upon VHB's substantial breach of the agreement, provided there has been no breach by SUBCONSULTANT, or because of non-payment by VHB's Client. In case of suspended Services, SUBCONSULTANT shall promptly recommence any suspended Services when and to the extent directed in writing by VHB. In the event of suspension period exceeding ninety days, Subconsultant shall have the right to terminate this Agreement.

Promptly upon termination of the agreement for whatever reason, SUBCONSULTANT shall deliver to VHB all documents and materials received by SUBCONSULTANT in connection with the project, whether completed or not. While not a condition of the above, SUBCONSULTANT shall be compensated for properly performed services.

Page | 16

Proactive by Design

- 11. All documents, information and other data furnished by SUBCONSULTANT the terms of this agreement shall be delivered to and become the property of VHB. While not a condition thereof, SUBCONSULTANT shall be compensated for properly performed services.
 - SUBCONSULTANT shall treat as proprietary and confidential all information provided by either VHB or its Client and all drawings, reports, studies, calculations, specifications and other documents or information, in any form or media. Subconsultant shall not divulge any proprietary or confidential information or material of either VHB or VHB's Client without VHB's prior written consent.
- 12. SUBCONSULTANT shall not subcontract, sell, transfer, assign, or otherwise dispose of this agreement or any portion thereof, or the work provided for therein, or of its right, title, or interest therein, to any person, firm, partnership or corporation without the prior written approval of VHB.
- 13. SUBCONSULTANT is bound in the same manner and extent as is VHB to all the applicable provisions of the Prime Agreement between VHB and its Client, a copy of which is attached hereto and made part of this agreement. In the event of a conflict between the documents, the stricter provision to the benefit of VHB shall govern. All specific provisions of the Prime Agreement that require VHB to pass on to the SUBCONSULTANT are hereby incorporated into this Agreement.
- 14. All disputes between the VHB and SUBCONSULTANT which cannot be settled amicably or by non-binding mediation shall be-settled by litigation in a court of competent jurisdiction.
- 15. SUBCONSULTANT certifies that it does not maintain, and will not maintain nor provide for its employees, facilities which are segregated on the basis of race, color, religion, or national origin.
- 16. If any of these conditions shall be determined to be invalid or unenforceable in whole or part, the remaining provisions shall remain in full force and effect, and be binding upon the parties hereto.
- 17. SUBCONSULTANT binds itself, its partners, successors, assigns, and legal representatives to VHB and to the partners, successors, assigns, and legal representatives of VHB with respect to all terms and conditions of the agreement.
- 18. The agreement represents the entire and integrated agreement between VHB and SUBCONSULTANT with respect to its subject matter and supersedes all prior negotiations, representations, proposals or agreements, either written or oral. The agreement may be amended only by written instrument signed by both VHB and SUBCONSULTANT.
- 19. In the event of any litigation or other legal proceeding arising from or related to the services provided or obligations assumed under this Agreement, the prevailing party will be entitled to recovery of reasonable costs incurred.
- 20. None of these terms and conditions, duties and obligations or other parts of the agreement shall be considered waived by VHB, nor shall any action or failure to act by VHB constitute a waiver unless reduced to written form and signed by VHB. No waiver shall be construed as a

modification of or an amendment to any of the provisions of the agreement or as an acquiescence in any past or future default or breach of the agreement unless expressly stated in writing by VHB.

- 21. All duties and obligations of SUBCONSULTANT which, by their nature, extend beyond the period of time during which the Services are performed shall survive the completion of the Services and/or the termination of the agreement for any reason.
- 22. Unless otherwise specified, the agreement shall be governed by, and interpreted, construed and enforced in accordance with, the laws of the State of New York provided, however, that if under the law governing the prime agreement the applicable statute of limitations period is longer than that under the laws of the State of New York, then the longer period shall govern.

AGREED TO AND ACCEPTED BY SUBCONSULTANT

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

1025 Cove Road GZA GeoEnvironmental of NY

1025 Cove Road 104 West 29th St

Mamaroneck, NY 10543 New York, NY 10001

EDR Inquiry # 4546842.4 Contact: RAHUL BHATIA

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by GZA GeoEnvironmental of NY were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results: Coordinates:

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GZA GeoEnvironmental of NY were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GZA GeoEnvironmental of NY were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by GZA GeoEnvironmental of NY were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CVS PHARMACY #1949	1310 BOSTON POST RD	WNW 0 - 1/8 (0.118 mi.)	H31	77

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

EXCELSIOR CLEANERS	1320 BOSTON POST RD.	W 0 - 1/8 (0.118 mi.)	H29	53

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/09/2015 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

NY SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the NY SHWS list, as provided by EDR, and dated 01/12/2016 has revealed that there are 5 NY SHWS sites within approximately 1 mile of the target property.

Site Code: 56084

Class Code: Significant threat to the public health or environment - action required.

NY VAPOR REOPENED: "Vapor intrusion" refers to the process by which volatile chemicals move from a subsurface source into the indoor air of overlying or adjacent buildings. The subsurface source can either be contaminated groundwater or contaminated soil which releases vapors into the pore spaces in the soil. Improvements in analytical techniques and knowledge gained from site investigations in New York and other states has led to an increased awareness of soil vapor as a medium of concern and of the potential for exposures from the soil vapor intrusion pathway. Based on this additional information, New York is currently re-evaluating previous assumptions and decisions regarding the potential for soil vapor intrusion exposures at sites. As a result, all past, current, and future contaminated sites will be evaluated to determine whether these sites have the potential for exposures related to soil vapor intrusion.

A review of the NY VAPOR REOPENED list, as provided by EDR, and dated 08/01/2015 has revealed that there are 2 NY VAPOR REOPENED sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

NY SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the NY SWF/LF list, as provided by EDR, and dated 01/05/2016 has revealed that there are 2 NY SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

NY LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the NY LTANKS list, as provided by EDR, and dated 11/16/2015 has revealed that there are

75 NY LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

NY UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation's Petroleum Bulk Storage (PBS) Database

A review of the NY UST list, as provided by EDR, and dated 12/29/2015 has revealed that there are 8 NY UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 11/16/2015 has revealed that there are 16 NY Spills sites within approximately 0.125 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 5 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

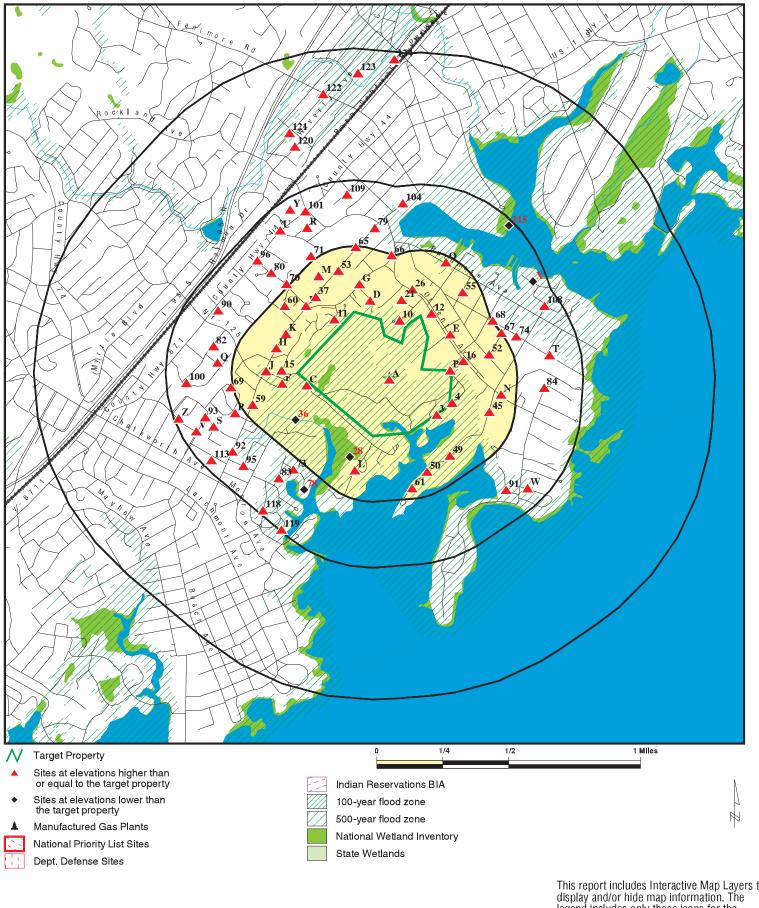

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "11/8/11 Job on hold until insurance company is notified...mm

1/17/12: Call from Stephanie at Tank Masters. She states the UST was inside of a foundation for an addition on the house. They have hand dug contaminated soil from within this area and are now down to approx 10 and a half feet below grade. They are at the base of the foundation and cannot dig further without undermining. PID readings at the base of excavation still approx 250 ppm. No ground water impact at this time. They will dig out what they can safely, take exit sample and then install a vapor barrier upon backfill. Closure report will follow, jod 11/21/13: Call from Robert Hughes, Village of Mamaroneck Bldg Dept. Owner is now selling the property and trying to close out the permit. Message sent to Tank Masters requesting the closure report. jod 9/22/15: Message sent to Tank Masters requesting a closure report. jod 9/23/15: Response from Brian at Tank Masters: I remember this project. CHUBB was the carrier. I'm not sure if you were sent a closure report because we are unable to find anything in our micro files. We have the physical folder with most of the paperwork needed to put something together for you. The problem with this is a falling out with Stephanie Munson. She left Tank Masters with no notice. She had several files with her and at the time I was un aware of which closures were completed and sent. I will have Craig get right on this and will put together as much as he can. If there is a shorter version we could supply for you which could get closure, please let us know. jod 10/05/15: Tank Masters was able to supply the disposal receipt for 16.5 tons of petroleum contaminated soil, as well as post excavation soil samples from the base and four walls of the excavation. Documents have been entered into DecDocs. Soil sample results show that contamination well over CP-51 Guidance was still present. Brian Monahan reports that the owner's son removed them from the job before the remediation was completed, and they were never paid for work performed. Site is inactive. jod"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

EPA Region: 02

Land type: Facility is not located on Indian land. Additional information is not known.

Classification: Small Small Quantity Generator

Description: Handler: generates more than 100 and less than 1000 kg of hazardous

> waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of

hazardous waste at any time

Owner/Operator Summary:

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

US Tank Tech. This property is the estate of Leonard Green. Contact/executor is Rich Sporn. After initial TTF the tank was repiped by Westmore Fuel and retested. Kathy called dispatch desk to notify DEC that the tank failed the retest earlier today. I called and spoke with the contact, Rich Sporn. He was unaware of the retest failure. I e-mailed him a list of remedial contractors and discussed options to address the spill issue. jod 8/17/2010: DEC reviewed closure information received from EnviroShield. The leaking UST was removed, a total of 419.24 tons of petroelum contaminated soil excavated and disposed of, final soil and GW sample results were below recommended clean up objectives. Report to be entered into eDocs. Based upon the information provided, no further action is required at this time. jod"

ICIS (Integrated Compliance Information System) is the Integrated

Direction Distance

Elevation Site Database(s) EPA ID Number

WESTCHESTER DAY SCHOOL (Continued)

1004572243

EDR ID Number

Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "2/3/12- Left message for call back, 914-447-3191. DT Call back from

Gordon. Tank overfill; product out of fill pipe onto concrete and then into some soil along concrete pad. Concrete being cleaned and impacted soil being removed. he has notifed Bob at School of cleanup action and also notified WCDOH. Spill amount is 2-3 gals. DT 2/3/12: Received a phone call from Paul Basso of Milro Associates. They have been contacted by Burke and are responding to the scene. Will update DEC. jod >>> Paul Basso pbasso@milroassoc.com> 2/6/2012 8:44 AM >>> Milro responded to a spill for Burke on Friday 2/3 at the Westchester Day School, 856 Orienta Ave, Mamaroneck. Burke estimated 3-5 gallons of oil was released from the tank vent pipe due to an overfill. Milro responded for emergency service and excavated 1 yard of oil contaminated soil from the area around the vent pipe. PID readings indicate the soil removal is done. We are backfilling the area today

because it is in an area the kids use daily. PID readings were all 0

ppm. Paul Basso Milro Associates jod "

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

DEC Memo: "10-29-13 Spoke with Lisa Smith at Beach Club. She will have either

the General Manager, Mark Sheehan or Rich Bell, maintenance manager, return call to dispatch desk regarding the plans for this tank - EIR or tank pull. jm 10-31-13 Received callback from Mark Sheehan. He says that they did retest and tank passed. They found leak was in return line but there was no petroleum release. They have hired a licensed plumber who will be replacing this line. jm 2-3-14 Kathy called to update spill. She mentioned that they tested the isolated tank in Oct 2013 and it passed. New lines have been installed since then. She said envirotube in pvc piping. The retest of the system failed. jc 2-4-14: Kathy/US Tk.Tech call to Dispt./V.Mc. UST failed re-test. 2-4-14 sent email to WCHD plesase remove tanks, RDB 2-4-4 called Kathy and asked what the story was, tested on 10-29 failed, 10-31 islates tank and it passed, plumber replaced lines retested 2-3-14, and it failed, readjusted a vent and retested on 2-4-14 and

03-4-2014 advised WCHD tank needs to be replaced. RDB 03-102014 email from WCHD, to Beach club, tank needs replacement. 03-25-14 close spill 13-10549 and leave 13-07738 Open RDB 03-25-14, email update, Received an email yesterday from Orienta stating that Robinson will

it failed I requested a new spill number 13-10549 & 13-11171 RDB

DEC Memo:

"7-23-09 As stated by Kathy, they have recommended E, I & R to homeowner. jm 9/9/09 - EnviroStar removed the tank. The tank has holes and there is soil impacts. EnviroStar will submit cleanup report to DEC. KAB 9/17/09: This is an Allstate claim, H2M is the consultant. Envirostar has removed approx 200 tons to date. Ground water has been impacted and there is a thick smear zone due to tidal influences. Additional contamination extends beneath a garage. Further excavation ongoing today and Martha from H2M will be back onsite tomorrow. jod 9/21/09: E-mail in edocs. jod 10/14/09: Received a recommendation proposal from Lighthouse Environmental, forwarded from attorney David Gladstone - reps for the prospective buyer. See edocs. jod 2/16/10: Update from Martha Relyea of H2M: As per Envirostar's monitoring logs (attached), we are consistently getting -inch or greater of floating product within the wells. We are currently completing VEFR events two (2) times per week based upon the continued presence of floating product. However, Mr. Bonnist is wondering whether there are any alternative options that could speed up product recovery and/or groundwater remediation. Two things I mentioned to him were the possibility of a pump and treat system, and using a bioremediation technique. I know the traditional approach is to continue with the VEFR's until product is non-detect within both wells, but would the NYSDEC be interested in either of these two approaches? If so, I can look into obtaining estimates accordingly. Otherwise, we will continue with the VEFRs as per usual. >>H2M will discuss alternative methods of ground water remediation with the owner and update DEC. jod 5/10/10: Temporary pump and treat system had been installed and was in operation for approx 2 months, and was then removed this week. Trace amounts of free product are still accumulating in the recovery wells. Remediation is now back to VEFRs. The original prospective buyer is no longer involved. Daniel Natchez is the rep for the new prospective buyer. He met on site this morning with H2M - then discussed the spill file with me - and states he will now discuss additional remedial proposals with the owner and their contractors. jod 5/11/10: I spoke with the property owner Mr Randy Bonnist. An onsite meeting is tentatively scheduled for 5-19-10 to discuss further remedial options. jod 5/19/10: Site inspection. Free product still being recovered from the monitoring wells. VEFR operations to date are insufficient. Further subsurface investigation necessary and required. jod 6/4/10: H2M has scheduled a geoprobe investigation for Monday 6-7-10. Report will follow. jod 6/15/10: I received a call from Marc DiBartolo of Envirostar. H2M has requested an estimate for the removal of an additional 150 tons of contaminated soil. Report from H2M received and entered into eDocs. Contamination is still extensive under the driveway and to the rear of the property, jod 7/12/10: Site inspection with the property owner, Martha and Augustine from H2M, and Marc DiBartolo and the rest of Envirostar's crew. In the last two weeks, an additional 300+ tons of petroleum contaminated soil has been excavated and removed. Over 1,000 tons has been disposed of to date. This morning, approx 3,000 gallons of petroleum contaminated ground water was removed with a vaccuum truck. Contaminated soil is still extensive going toward the

Direction Distance

RESIDENCE (Continued) S109829744

> driveway. Free product continues to flow into the excavation with ground water recharge. Additional excavation and disposal will take place. H2M will notify DEC when further work has been completed for another inspection. jod 9/15/10: Final closure report from Envirostar Corp reviewed by DEC. Report will be entered into eDocs. A total of 1562.02 tons of petroleum contaminated soil was removed and shipped for disposal. A total of more than 10,000 gallons of petroleum contaminated ground water removed. Final sample results reviewed. Based upon the information provided, no further action is required at

this time. jod"

DEC Memo: 366020

DEC Memo: "7-23-09 As stated by Kathy,"

"7-23-09 As stated by Kathy, they have recommended E, I & R to homeowner. jm 9/9/09 - EnviroStar removed the tank. The tank has holes and there is soil impacts. EnviroStar will submit cleanup report to DEC. KAB 9/17/09: This is an Allstate claim, H2M is the consultant. Envirostar has removed approx 200 tons to date. Ground water has been impacted and there is a thick smear zone due to tidal influences. Additional contamination extends beneath a garage. Further excavation ongoing today and Martha from H2M will be back onsite tomorrow. jod 9/21/09: E-mail in edocs. jod 10/14/09: Received a recommendation proposal from Lighthouse Environmental, forwarded from attorney David Gladstone - reps for the prospective buyer. See edocs. jod 2/16/10: Update from Martha Relyea of H2M: As per Envirostar's monitoring logs (attached), we are consistently getting -inch or greater of floating product within the wells. We are currently completing VEFR events two (2) times per week based upon the continued presence of floating product. However, Mr. Bonnist is wondering whether there are any alternative options that could speed up product recovery and/or groundwater remediation. Two things I mentioned to him were the possibility of a pump and treat system, and using a bioremediation technique. I know the traditional approach is to continue with the VEFR's until product is non-detect within both wells, but would the NYSDEC be interested in either of these two approaches? If so, I can look into obtaining estimates accordingly. Otherwise, we will continue with the VEFRs as per usual. >>H2M will discuss alternative methods of ground water remediation with the owner and update DEC. jod 5/10/10: Temporary pump and treat system had been installed and was in operation for approx 2 months, and was then removed this week. Trace amounts of free product are still accumulating in the recovery wells. Remediation is now back to VEFRs. The original prospective buyer is no longer involved. Daniel Natchez is the rep for the new prospective buyer. He met on site this morning with H2M - then discussed the spill file with me - and states he will now discuss additional remedial proposals with the owner and their contractors. jod 5/11/10: I spoke with the property owner Mr Randy Bonnist. An onsite meeting is tentatively scheduled for 5-19-10 to discuss further remedial options. jod 5/19/10: Site inspection. Free product still being recovered from the monitoring wells. VEFR operations to date are insufficient. Further subsurface investigation necessary and required, jod 6/4/10: H2M has scheduled a geoprobe investigation for Monday 6-7-10. Report will follow. jod 6/15/10: I

received a call from Marc DiBartolo of Envirostar. H2M has requested an estimate for the removal of an additional 150 tons of contaminated soil. Report from H2M received and entered into eDocs. Contamination is still extensive under the driveway and to the rear of the property. jod 7/12/10: Site inspection with the property owner, Martha and Augustine from H2M, and Marc DiBartolo and the rest of Envirostar's crew. In the last two weeks, an additional 300+ tons of petroleum contaminated soil has been excavated and removed. Over 1,000 tons has been disposed of to date. This morning, approx 3,000 gallons of petroleum contaminated ground water was removed with a vaccuum truck. Contaminated soil is still extensive going toward the driveway. Free product continues to flow into the excavation with ground water recharge. Additional excavation and disposal will take place. H2M will notify DEC when further work has been completed for another inspection. jod 9/15/10: Final closure report from Envirostar Corp reviewed by DEC. Report will be entered into eDocs. A total of 1562.02 tons of petroleum contaminated soil was removed and shipped for disposal. A total of more than 10,000 gallons of petroleum contaminated ground water removed. Final sample results reviewed. Based upon the information provided, no further action is required at this time. jod"

Remarks:

"1511 The caller advised dispatch the tank failed their test. The caller recommends repair and retest to the property owner."

Contact Name: KEVIN BRADLEY
Contact Phone: Not reported

DEC Memo: "11/19/10: Kevin Bradley reports GES was on site to conduct quarterly

ground water sampling from the monitoring wells. Open spill for this facility is 8810062, PBS 3-048844. GES found between 0.001 and 0.1 inches of free product in five of the wells. One of the dispensers is not working and station staff do not know why. GES is currently bailing the wells and will install sorbent socks. Exxo Mobil Maintenance staff has been notified. 11/19/10 12:10pm Kevin Bradley from GES reported that no product was detected in these five wells during the last quarterly sampling, so this is a new event. He went on to say that the lines were tested on Wed 1/17. Island Pump and Tank reported that two lines passed and one test was inconclusive for the third line. A retest is scheduled for Monday 11/22 on that line. TG Product found in the following wells: MW-6 0.1' MW-7 0.09' MW-8 0.1' MW-11 0.1' MW-13 0.01' 11/19/10 3:15pm Kevin Bradley reported that ExxonMobil has sent a contractor blow out the line and close the premium pumps for the weekend. Further equipment inspections planned for Monday 11/22/10. TG 11/22/10: Tanks tested by Island Pump & Tank this morning. Super unleaded tank failed, reported as Spill 1008787. Joe Mancini of WCDOH reports the failure was from a flex line connector on the top of the tank. Inventory reconciliation was beginning to show a loss starting last week, jod Line repaired and retested. Passing result in eDocs. This site same as historical spill # 8810062. Plan for investigation of impact from this spill expected shortly. Report on interim measures of product bailing and vacuuming shows no product detections since DEC 2010. PJD Report rec'd June 17 2011. No recurrence of product. Stip agreement to be sent to CPD refering to both this spill # and 8810062. PJD June 2011 See up to date eDocs for approved workplans and reports of subsurface and remedial investigations from 2011 into 2013. Pilot testing of vapor/water extraction and air sparge technologies was found to be successful. Groundwater contaminants also began to show declining trends during this period. Remediation was determined to be needed, however, as an alternative to systems operation, a proposal was made to conduct periodic remedial events with mobile equipment. Such a plan was approved by DEC in June of 2013, implemented in late 2013 and in 2014 additional mobile events are planned. In addition, a plan to conduct subsurface investigation on a property across Palmer Ave. was approved after the property owner has now indicated a willingness to grant access after denying it for years. PJD March 2014. 3-15 reports submitted December 2014 RDB 4-7-15 transfer to KB met with GES RDB 11/9/15 - The 3rd quarter monitoring report showed on monitoring well with elevated levels of BTEX. I would recommend additional monitoring of that well. The RP had conducted the DEC and stated it has additional information on the site. Awaiting the additional information before a decision will be made. KAB "

Remarks: "FOUND PRODUCT IN 5 MONITORING WELLS, CLEANUP PENDING."

Location Description: The Happiness Laundry Site is located at 613 Site Description:

Waverly Avenue, Mamaroneck, Westchester County, NY.Predominant Site

Features: The site is a 0.74 acre vacant lot. Current Use: The site is currently inactive. Surrounding Uses: The site is situated along the northwestern side of Waverly Avenue within a commercial/light industrial neighborhood consisting of mixed-use properties. The Sheldrake River is to the northwest of the site. Historical Source(s) of Contamination: A former laundry service (Happiness Laundry) operated at the site until 2006 when active use of the site

reportedly ceased and structures were removed from the property. A Remedial Investigation of the nearby Former EMCA Site (#360025) has

S110246764

EDR ID Number

been completed and data from this investigation identified elevated perchloroethylene (PCE) in shallow groundwater. Happiness Laundry was identified as the likely source of this contamination.

Investigations/Actions Performed to Date: The 613 Waverly Avenue property is the subject of spill case number 0700334, due to petroleum contamination. Under the spill case, approximately 2,167 tons of petroleum contaminated soil was excavated from the site in September/October 2007. Groundwater monitoring wells were also installed to evaluate potential site-related contamination. A Site Remedial Summary Report, dated December 12, 2007 was submitted to the Department. Other spill cases associated with this site include: 0505708, 9805021, 8905945, and 8905946. Current Actions: The remedial actions performed under the spill case have adequately addressed the

PCE contamination at the site. Therefore, no further action is anticipated at this time to address PCE. Additional remedial work may

be necessary under the spill case.

Env Problem: Contaminants of Concern: The primary contaminants at the site include

volatile organic compounds (VOCs) related to the former dry clean operations, including tetrachloroethene (PCE) and its breakdown products, and petroleum-related compounds. Impacted Media: Investigations of the environmental conditions found PCE,

trichloroethene (TCE), dichloroethene (DCE), vinyl chloride (VC) and petroleum-related compounds in the soils and groundwater at the site. Known SCG Exceedances: Exceedances of standards, criteria, and guidance include PCE, TCE, DCE, VC and petroleum-related compounds.

The contamination, however, has been reduced/removed since contaminated source area soil was excavated during the 9/07-10/07

remedial effort under spill case 0700334.

Avenue, Village of Mamaroneck, Westchester County, New York. This site originally consisted of four parcels: Section 8, Block 829, Lot 69 (Parcel I); Section 8, Block 829, Lot 92 (Parcel II); Section 8, Block 829, Lot 41 (Parcel III); and Section 8, Block 829, Lot 51 (Parcel IV). The site boundaries have since been modified to include Parcels I and IV only due to disposal history and current groundwater impacts. Parcels II and III have been excised from the site as no disposal occurred on those parcels, nor are they affected by Freon-113. Site Features: The site consists of a two-story building and two parking areas. Current Zoning/Use: The site is located in an industrial/commercial/residential area. Cablevision of Westchester currently uses the site as a cable television service center. Past Use of the Site:Prior to its current use, EMCA, a subsidiary of Rohm and Haas, owned and operated the site to manufacture electronic conducting paste from 1968 to 1988. The manufacturing activities were contained on the first floor of the building. The vacant lot which is now a parking area (604 Fayette) was used for waste storage and is a likely area of disposal. Other potential areas of disposal or spill are the material storage room, the ball milling room and powder room. Freon 113 was used in the ball milling operation. Site Geology and Hydrogeology: The shallow groundwater appears to flow from the south. east and west toward the center of the site and then flow off the site in a northerly direction towards the Sheldrake River. There is no domestic groundwater usage within one-half mile of the site. The

Map ID Direction Distance Elevation

Site

MAP FINDINGS

Database(s)

EDR ID Number

EPA ID Number

area is served by public water supply. Geologic conditions at the site are characterized by unconsolidated deposits composed predominantly of stratified medium to fine sand with localized beds of coarse sand, gravel, silt, and clay. Bedrock is assumed at an approximate depth of 40 feet. Groundwater conditions consist of a water table aquifer encountered at a depth of approximately 6 feet below ground surface. Groundwater generally flows to the northwest towards the Sheldrake River.

Env Problem:

Nature of Contamination:Based on the investigations conducted to date, the primary contaminants of concern at the site are volatile organic compounds (VOCs), including Freon 113 and its breakdown products, specifically 1,2-dichlorotrifluoroethane. Freon 113 was detected in on-site groundwater at 18,208 ppb and in on-site soil at 1,200 ppb. Other organic compounds were also detected (tetra-chloroethylene, 1,2-dichloroethylene, trichloroethylene, acetone, benzene and chloroethane) from an upgradient source(s). This indicates that the presence of Freon 113 in the underlying groundwater is related to site operations, but the other VOCs appear to have migrated onto the site from a nearby business or businesses. Based on the investigations conducted at the site, the Freon 113 contamination does not extend off-site. The potential for soil vapor intrusion impacts was determined to be low. Extent of Contamination: Source Areas/Waste Disposal - The former vacant lot (604 Fayette Avenue) was used for waste storage and has been identified as the primary source area which had led to groundwater contamination. Surface soil - Contact with contaminated soils is not expected because the site is covered by buildings and pavement. Groundwater - The groundwater underlying the site has been impacted by Freon-113 (580 ppb in October 2010). Based on the investigation at the site, the Freon-113 contamination does not extend off-site. The approved remedy which consists of continued vegetable oil injections to stimulate anaerobic biodegradation of Freon-113 in groundwater is ongoing. Drinking contaminated groundwater, however, is not likely since the area is supplied with public water. Soil Vapor Intrusion - The evaluation of the potential for soil vapor intrusion resulting from the presence of groundwater contamination was performed by conducting indoor air, sub-slab soil vapor and outdoor air sampling at the Site on March 26, 2009. Three sub-slab vapor samples, three indoor air samples and one outdoor air sample were collected at the existing Cablevision facility. The primary contaminants of concern were Freon-113 and its breakdown products. The samples were also analyzed for other constituents including tetrachloroethene and its breakdown products in order to assist the Department in tracking impacts to the Site due to other contaminants which may be emanating from off-site sources. The indoor air samples concentration for Freon-113 ranged from 10 g/m3 to 38 g/m3 which exceed typical background concentrations. The maximum indoor air concentration was detected in the sample collected from the Conversion Room. The sample locations are shown on Figure 3 from the June 2009 Vapor Intrusion Study Report. The sub-slab vapor concentrations for Freon-113 ranged from 37 g/m3 to 6,700 g/m3. The maximum sub-slab vapor concentration was detected in the sample collected from the Muster Room. The concentration levels of the the additional constituents that there included in the analysis did not rise to the level that would require any further action. While the indoor air concentration detected for Freon-113 exceeded typical background concentrations, the NYSDOH determined that there were no

Direction Distance

Elevation Site Database(s) EPA ID Number

FORMER EMCA SITE (Continued)

S108925409

EDR ID Number

potential health issues associated with the detected levels of Freon-113 in the indoor air samples collected. Based on these findings, no further actions are needed on-site or off-site to address exposures related to soil vapor intrusion. Significant Threat Determination: Actual or threatened release of hazardous waste constituents from this site have been addressed by implementing the organic substrate injection Interim Remedial Measure (IRM) identified in the ROD. Specifically, the treatment of contaminated groundwater via emulsified vegetable oil injections has significantly reduced the

threat to public health and the environment.

Health Problem: Contact with contaminated soils is not expected because the site is

covered by buildings and pavement. Drinking contaminated groundwater

is not likely since the area is supplied with public water.

Site Description: LocationThe site is located in an industrial area on the corner of

Fenimore Ave. and Center Street. Site FeaturesOn the site there is a single story metal and masonry block building which covers most of the site. Past Use of the SiteThe last known use of the facility (as of 1993) was an automotive repair shop. The property was foreclosed upon. A tank removal and environmental assessment was performed at

Direction Distance Elevation

ation Site Database(s) EPA ID Number

624 FENIMORE AVENUE (Continued)

S100491509

EDR ID Number

the site which revealed contaminated groundwater. However, it is not

clear whether the contamination is site-related.

Env Problem: Soils and groundwater at the site have been contaminated with

volatile organic compounds and metals. An environmental assessment

found contaminated groundwater in the monitoring wells and contaminated soil in unlined pits inside the facility. Groundwater contained TCE at up to 440 ppb and PCE at up to 510 ppb. Soil

contained PCE at up to 1700 ppb, lead at up to 6200 ppm, and chromium

at up to 700 ppm. However, it appears that groundwater is

contaminated at the upgradient boundary of the site, suggesting an

off-site source of solvent contamination.

Health Problem: As information for this site becomes available, it will be reviewed

by the NYSDOH to determine if site contamination presents public

health exposure concerns.

Site Description: Location: The former ITT Sealectro site is located in an urban area

at 139 Hoyt Avenue, in the Village of Mamaroneck, Westchester County. Site Features: The main feature on the 0.92 acre site is a single story building (approximately 20,000 square feet) which sits on a concrete slab. The rest of the property consists of an asphalt parking lot and landscaped areas. Current Zoning and Land Use: The

parking lot and landscaped areas. Current Zoning and Land Use: site is currently active as a retail store, and is zoned for manufacturing use (M-1), which allows certain commercial and

manufacturing use (M-1), which allows certain commercial and industrial applications. The surrounding parcels are currently used for residential, commercial and industrial purposes. The nearest residential area is approximately 185 feet to the northwest. Past Use of the Site: From 1960 to 1990, ITT Sealectro manufactured electronic parts and jewelry at the site. The company used machine oils and cleaning solvents in its manufacturing operations. Spent solvents, electroplating wastes, and fuel oil leaked from underground storage tanks (USTs) into underlying soils and groundwater. Site Geology and Hydrogeology: The site geology consists of three unconsolidated units that overlie gray granitic gneiss bedrock, which is located between 29 and 40 feet below ground surface. The uppermost unconsolidated deposit is composed of fill including fine to coarse grained sand and gravel with cinders and slag. The middle unit consists of

gravel with cinders and slag. The middle unit consists of inter-layered discontinuous lenses of sand, silt and clay. The unconsolidated deposit immediately atop bedrock consists of sand and gravel. The groundwater table occurs between 5 and 8 feet below the ground surface. There are two ground water zones: the shallow zone occurs in the sand, silt and clay unit, while the deep zone occurs in the sand and gravel unit. Groundwater flows to the north in both zones. There is an upward hydraulic gradient from the deep zone to

the shallow zone.

Env Problem: Nature and Extent of Contamination:Prior to Remediation: Based on

investigations conducted to date, the primary contaminants of concern are volatile organic compounds (VOCs) including 1,1,1-trichloroethane

Direction Distance Elevation

Site Database(s) EPA ID Number

ITT SEALECTRO CORP. (Continued)

1000131198

EDR ID Number

(TCA), tetrachloroethene (PCE), trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE), 1,1-dichloroethene (1,1-DCE), 1,1-dichloroethane (1,1-DCA), 1,2-dichloroethane (1,2-DCA), toluene, xylene, benzene and vinyl chloride. Soil- PCE, TCE, TCA, 1,2-DCE, 1,1-DCE, 1,2-DCA, xylene and toluene were found in subsurface soils. The maximum total VOC concentration was 8,200 ppm. Groundwater- The groundwater was also impacted by PCE, TCA, TCE, 1,2-DCE, 1,1-DCE, 1,1-DCA, benzene and vinyl chloride. Maximum concentrations were 1,600 ppb (PCE), 75 ppb (TCE, 610 ppb (TCA), 300 ppb (1,1-DCA), 77 ppb (1,2-DCE), 670 ppb (1,1-DCE), 200 ppb (vinyl chloride), and 29 ppb (benzene). Soil Vapor and Indoor Air- Soil vapor (parking lot) was found to be impacted by TCE, TCA and PCE. Maximum concentrations were 4,500 ug/m3 (TCE), 1,100 ug/m3 (TCA), and 520 ug/m3 (PCE). Subslab soil vapor had maximum concentrations of 24,000 ug/m3 (TCE), 2,700 ug/m3 (TCA), and 11,000 ug/m3 (PCE). Indoor air had maximum concentrations of 91 ug/m3 (TCE), 19 ug/m3 (TCA), and 140 ug/m3 (PCE).Post-Remediation: Remediation (soil and UST removal) is complete. The operation of the groundwater extraction and treatment system at the former location of the solvent underground storage tanks continues. A subslab depressurization system was installed in the on-site building in December 2013.

Health Problem:

Since some contaminated soils remain at the site below concrete or clean backfill, people will not come in contact with contaminated soils unless they dig below the surface materials. Groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Soil vapor intrusion sampling identified impacts in indoor air quality. This impact is limited to one on-site building and represents a health concern.

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

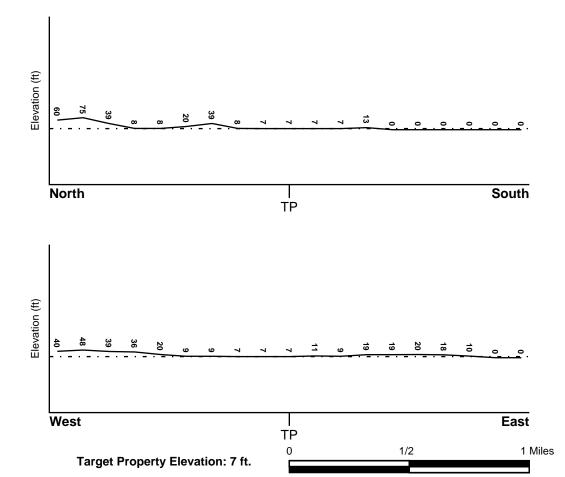

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 The state of the

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Chatfield

Soil Surface Texture: loam

Hydrologic Group: Class C/D - Drained/undrained hydrology class of soils that can be

drained and classified.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Воц	undary		Classification		Saturated hydraulic

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

John M. Gavras P.G., CPG

Associate Principal

Summary of Experience

Mr. Gavras is a Professional Geologist (P.G.) and a Certified Professional Geologist (CPG) with over thirty years of comprehensive professional consulting experience including client and Program Management, and diverse project experience in geologic and hydrogeologic analyses and interpretation. Mr. Gavras is the Director of Environmental Services in GZA's Manhattan offices. He directs environmental assessment programs to determine the nature and extent of corrective action at industrial and municipal sites characterized by hazardous wastes and hazardous materials in structures, and in soil, groundwater, soil vapor, and surface water. Mr. Gavras directs the compliance status of aboveground and underground tanks and systems, and has directed numerous projects within New York State's Brownfield Cleanup Program, New York City's Voluntary Cleanup Program, and New York City's E-Designation Program and Restrictive Declaration Sites.

He also directs risk assessments, remedial action work plans, remedial investigations, and remedial alternatives analyses; directs pre-purchase and pre-sale environmental due diligence services and Phase II Environmental Site Investigations to assess site conditions, identify recognized environmental conditions, evaluate environmental risks, and develop and implement remedial action plans for mitigating environmental risks for foundation construction and development.

Relevant Project Experience

Principal-in-Charge, MTA Bridges and Tunnels, Borden Avenue, New York, New York. GZA was contracted by Navillus Contracting, Inc. on behalf of the Metropolitan Transportation Agency (MTA) Bridges and Tunnels to mitigate soil and groundwater contamination for the closure of a New York State Department of Environmental Conservation (NYSDEC) Open Spill Case. Mr. Gavras is Principal-in-Charge of the Environmental Remediation for the project at Borden Avenue. Mr. Gavras is directing the management and excavation of petroleum-impacted soil, and the implementation of the In-Situ Chemical Oxidation (ISCO) remedial program for the Site. ISCO remediation involves the injection of Fenton's Reagent through a series of injection points and excavations to remediate petroleum impacts in groundwater and to address an active NYSDEC Spill Case. GZA is an integral part of the Project Team that interfaces with the New York State Department of Environmental Conservation's (NYSDEC) Division of Remediation (DER) and has been involved in recommending alternative remedial approaches to the NYSDEC for the effective remediation of the active Spill Case.

Senior Project Manager, John Jay College Expansion Project (Remediation Phase), New York, New York. Managed remedial activities and construction oversight in connection with environmental tasks during foundation construction. The 3-acre property was a former manufactured gas storage and distribution facility, a gasoline filling station and a warehouse, and includes an Amtrak track right-of-way. Services included environmental due diligence, design and oversight of abatement and building demolition, preparation and implementation of a remedial investigation plan and preparation of remediation construction documents in coordination with site/civil, geotechnical, structural and mechanical design efforts. We are currently

John M. Gavras P.G., CPG

Associate Principal

overseeing the remedial elements for a multi-story structure, which would include classrooms and dormitory space, which would be connected to the existing John Jay College building. Served as Senior Project Manager for all environmental remediation work required, plan preparation and demolition contractor specifications. As part of the environmental investigation, developed and managed an EQuIS chemistry database for the management of all soil, groundwater and soil gas data for the multi-story expansion with two below-grade basement levels.

Principal-in-Charge, Brooklyn Bay Center, Gravesend Bay, Brooklyn, New York. GZA provided environmental remediation services for a complex, 8-acre, man-made peninsula that was redeveloped into a BJ's Warehouse with a publicly-accessible waterfront esplanade. GZA's negotiations with the NYSDEC and innovative disposal solutions led to a gross savings of over \$1 million in disposal costs for the developer and allowed the project to advance on an accelerated schedule. GZA performed remedial oversight and reporting of the following activities to facilitate site redevelopment: closure and remedial excavation of nineteen underground storage tanks and associated petroleumimpacted soil; remedial excavation of hot spot areas with elevated metals, polycyclic aromatic hydrocarbons, and other petroleum impacts; screening of solid waste and beneficial reuse of soil under a NYSDEC-approved Beneficial Use Determination; demarcation of residual soil and backfill placement; state regulatory petroleum spill case closure; community air monitoring during remediation and redevelopment; design and installation of a building sub-slab depressurization system, vapor barrier, methane and H2S passive monitoring systems, and a composite cover system; and installation of a groundwater monitoring well network to evaluate post-remediation groundwater quality. The lynchpin of the project's development was a modification to the Beneficial Use Determination obtained from the NYSDEC during the solid waste processing activities. The BUD modification allowed for the crushing and reuse of the expansive concrete slabs and abundant concrete fill that was used to raise the grade in other portions of the site.

Task Manager, DASNY John Jay College Building Expansion, Phase I Environmental Site Assessment and Independent Third-Party Technical Review, New York, New York. Managed Phase I environmental site assessments of the proposed location for the John Jay College Phase II Building development by Dormitory Authority of the State of New York (DASNY). Mr. Gavras assisted in the technical

oversight of the Phase I environmental assessment to ensure that it was consistent with ASTM Standard Practice for Environmental Site Assessments. He oversaw the development of the Phase I report, which identified, within limits, the property's potential environmental liabilities through the review of available historical maps, government regulatory records, site observations, and previous reports. Potential and recognized environmental conditions documented in the Phase I report included asbestos containing material, lead-based paint, suspect polychlorinated biphenyl (PCB)-containing equipment, and solvent and petroleum-impacted soil. The Phase I report also recommended investigative activities, including the installation of soil borings, tests pits, and the implementation of Health and Safety and air-monitoring programs. Review of historical background information indicated that the Site had been identified as the location of a former Consolidated Edison Company gasholder station, and the Site was the subject of a Voluntary Cleanup Agreement (VCA) between the NYSDEC and Consolidated Edison. Pursuant to the VCA, Consolidated Edison was to be responsible for investigating and, where necessary, remediating any residual contamination resulting from the historic operation of the former gasholder station. The additional Phase II activities were conducted by another Consultant consistent with a Site Characterization Work Plan that was developed pursuant to Consolidated Edison's VCA with the NYSDEC. Additional investigative activities included the installation of environmental soil borings and monitoring wells, geotechnical borings, and test pits, and the implementation of a comprehensive HASP and air-monitoring program.

Conducted a third-party technical review and evaluation of the Phase II Site Characterization Report for the former gasholder property. The primary objectives of the technical review were to evaluate the Consultant's draft Site Characterization Report (SCR) and provide a professional opinion and comments in connection with the methodologies, findings, and conclusions of the SCR and provide an opinion and comments regarding the potential sources of the coal-tar derived constituents (e.g., polycyclic aromatic hydrocarbons [PAHs], metals, and cyanide) detected at the subject property. DASNY also requested a review Con Edison's draft response letter to the SCR to evaluate and assess Con Edison's comments regarding the findings of the SCR along with their assertions of other sources of the PAH compounds and metals detected at the subject property. The result was a collaborative effort with the other Consultant to revise and

John M. Gavras P.G., CPG

Associate Principal

finalize the draft SCR and its related figures, tables, and appendices, and to provide a coordinated response to Con Edison's comment letter.

Task Manager, NYCDDC Harper Street Asphalt Plant, Queens, New York. During preparation of the master plan for the proposed asphalt plant, managed and implemented a subsurface sampling plan to evaluate petroleum-impacted soil, sediment, and groundwater from historical site operations. The supplemental sampling plan was prepared to quantify and delineate impacted soil and sediment and supplement existing groundwater quality data. The subsurface data was used to prepare contract documents for the site demolition and construction activities as well as remediation of petroleum-impacted soil, sediment, and groundwater. Within the flood-prone construction site located near Flushing Creek, Mr. Gavras assisted in the preparation of the environmental assessment and land use application, in compliance with the New York City Environmental Quality Review (CEQR) procedures. The project for the New York City Department of Design and Construction (NYCDDC) requires an investigation of dockside conditions and possible improvements. Because the project involved littoral zone wetlands disturbance from dredging, and reconstruction of an existing bulkhead, a joint permit application was prepared and filed with the New York State Department of Environmental Conservation (NYSDEC) and the U.S. Army Corps of Engineers (USACE). As part of the joint application, Mr. Gavras prepared a storm water pollution prevention plan (SWPPP), which incorporated oil/water separators as the primary treatment methodology. Since new outfalls were created, a State Pollutant Discharge Elimination (SPDES) permit application is being prepared along with the required Spill Prevention Control and Countermeasures Plan (SPCC).

Senior Project Manager, The Shops at Atlas Park, Queens, New York. Winner of the 2007 Phoenix Award for Brownfield Development in EPA Region 2, 2007 ACEC Gold Award for Engineering Excellence, and 2010 New York City Brownfield Cleanup Award for Open Space. Senior Project Manager for a 12-acre, 80-year old former industrial park that was redeveloped under the New York State Brownfield Cleanup Program for mixed-use commercial, office space and entertainment. Primary responsibilities included authoring and managing a number of submittals to the New York State Department of Environmental Conservation (NYSDEC) including a Remedial Investigation Report, Remedial Action Work Plan, and Final Engineering Report in connection with

obtaining a certificate of completion for the project. Atlas Park received the first such certificate to be issued for a NYC project under the Brownfield Cleanup Program, and one of only three such certificates in the State. Mr. Gavras managed the investigative and remedial activities and coordinated with the NYSDEC and the New York State Department of Health. As part of the remediation activities, numerous areas of concern were discovered and mitigated during mass excavation of historic fill from the property for new sub-grade structures (buildings and parking garages). As part of the remedy, sub-slab vapor-depressurization systems (SSDS) were designed and installed to address soil vapors in the subslabs of the proposed buildings. The SSDSs were designed and installed in accordance with the New York State Department of Health's soil-vapor intrusion guidance document. Additionally, an air sparge / soil vapor extraction system was designed and installed to remediate a chlorinated solvent plume in groundwater, which is approximately 60-feet below the site. The system is unique because these systems are typically installed at much shallower depths.

Principal-in-Charge, Columbia University/Manhattanville Campus Development, Bronx, New York. Under a term contract with Columbia University, GZA is providing a seniorlevel environmental project manager to serve as the Interim Director for Field Compliance implementing Columbia's Clean Construction Mitigation Plan at its Manhattanville Campus Development Project. The Interim Director leads a professional staff that proactively addresses potential daily impacts of construction on the surrounding community, including air quality, noise, traffic and vibration; construction parking; trash and rodent control; business disruption; site logistics; trucking and staging; route planning; communications, pre-construction surveys, and review of contractor plans. Early planning, regular monitoring and reporting, clear internal communications, effective problem solving, and timely enforcement are integral to the success of Columbia's Clean Construction Mitigation Plan. The Interim Director monitors contractors, project managers, and consultants for compliance with the program, enforces the program, and reports on compliance to the Manhattanville Campus Development Team. In addition to these planning and implementation elements, the Interim Director and the mitigation team serve as a resource for any community concerns regarding the construction activities and schedule.

Principal-in-Charge, Memorial Sloan-Kettering Cancer Center (MSKCC) – Former MGP Gasholder Facility. Principal-in-Charge of the environmental services in

John M. Gavras P.G., CPG

Associate Principal

connection with the development of MSKCC's York Avenue Ambulatory Surgery Building. The Site was initially developed c. 1874 with a five million cubic-foot capacity gasholder, as part of the former York Avenue Manufactured Gas Plant (MGP) acquired by Standard Gas Light Company of New York. The steel gasholder, reportedly 220-feet long and 41-feet deep, was constructed on a concrete foundation on top of bedrock. The York Avenue Gas Holder Station was operated until 1948, at which time the gasholder at the Site was removed and the attenuating piping was capped and abandoned in place. In 1948, following the removal of the gasholder, the remaining pit was backfilled with unknown material to the ground surface elevation.

The property was redeveloped in 1950 as a six-story commercial building consisting of a parking garage, a commercial office, and warehouse space. A previous Phase I Environmental Site Assessment of the Site identified a 10,000-gallon oil underground storage tank (UST) on the property that had been abandoned in-place using the foamfilling method. GZA GeoEnvironmental (GZA) performed geotechnical and environmental subsurface investigations prior to the building demolition for the construction of a new Outpatient Surgical Center.

GZA managed and navigated this development project through the New York City Mayor's Office of Environmental Remediation's (NYCOER's) E-Designation Program. GZA performed environmental oversight, including subsurface investigation and remediation activities, tank removal, daily status updates to the NYC OER, implementation of a CAMP, and the management, handling, characterization, and off-site disposal of impacted soil and dewatering fluids.

Principal-in-Charge - New York University, Center for Urban Science and Progress (CUSP) - Environmental Due Diligence Services and Universal-Waste and Hazardous-Materials Inspections, 370 Jay Street, Brooklyn, New York. GZA assisted New York University (NYU) during its due diligence phase in anticipation of a long-term lease at the Metropolitan Transit Authority's (MTA) 500,000 square-foot office building. Specifically, GZA conducted a Hazardous Materials and Universal Waste Inspections for suspect asbestos-containing materials, lead-based paint, polychlorinated biphenyls, and mold. GZA also inspected other areas throughout the building for suspect hazardous or universal waste materials including the roof, window caulking, and other building materials and infrastructure. GZA also conducted a Phase I Environmental Site Assessment and an inventory/inspection of the petroleum storage tanks at the

property. The findings, results, and conclusions of GZA's Hazardous Materials and Universal Waste Inspections along with the Phase I ESA and petroleum-storage-tank inspections were utilized by NYU to estimate costs for remediation and/or mitigation of the identified environmental concerns at the 370 Jay Street property.

Senior Project Manager, Columbia University, Manhattanville Development Project, Phases IA and 2, Manhattan, New York. Managed site investigation and remedial activities for the initial Phases of this multi-year, 17acre, and \$7 billion campus development project. The project involves the phased construction of numerous campus buildings within a five-block area. The construction will involve excavation up to 80 feet below grade to accommodate 6.8 million gross square feet of above- and below-grade mixed-use academic facilities. The scope of environmental services included compliance with local New York City and New York State regulations governing air pollution, noise generation, water discharge, and solid waste management during remediation and construction, and implementation of the obligations made by the university during the permitting phase of the project. Prepared assessments of properties as they became available for hazardous materials within buildings and under the surface, and prepared abatement and demolition plans and specifications and remedial action plans for removal and abatement of asbestos and other hazardous materials within the existing buildings, proper removal and closure of numerous underground storage tanks and spills, and remediation, handling, and management of impacted soil encountered during development.

Task Manager, DASNY Fashion Institute of Technology (FIT), Phase I and Phase II Environmental Site
Assessments, New York, New York. Managed Phase I and Phase II environmental site assessments for a former bookbindery that was renovated into a dormitory by the Dormitory Authority of the State of New York (DASNY) on behalf of the Fashion Institute of Technology (FIT). Mr. Gavras managed the day-to-day scheduling, client interaction, and technical oversight of this project.

He provided technical oversight to ensure that the development of the Phase I environmental assessment was consistent with American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments. Mr. Gavras managed the development of the Phase I report, which identified, within limits, the property's

John M. Gavras P.G., CPG

Associate Principal

potential environmental liabilities through the review of available historical maps, government regulatory records, site observations, and interviews. Based upon Phase I recommendations, he managed the Phase II site investigation that identified the presence of suspected environmental liabilities through a comprehensive lead-based paint and asbestos containing material investigation and a subsurface soil evaluation of suspect fuel-oil contamination. Mr. Gavras also managed the development of the Phase II report, which recommended the abatement of lead and asbestos containing material and shallow petroleum-impacted soil. He assisted in preparing cost proposals for DASNY for the abatement, removal, and excavation of this material in an effort to facilitate the property acquisition and conversion. These preliminary order-of-magnitude cost estimates were "worstcase scenarios" in order to render the building "hazard free". The unit costs were based on projects of similar size, location, and complexity. It was understood that these costs would be generated for utilization in the design phase, wherein they would be further refined and revised during subsequent discussions, planning, and coordination with the Project Architect and DASNY's Construction Project Manager. Mr. Gavras also developed and implemented a comprehensive PCB-wipe sampling and concrete coring/waste characterization program to evaluate the occurrence of PCBs throughout the fifteen-story building including the concrete floors and within oil-drip pans from the former bookbindery and printing operations. The results of the PCB wipe sampling, concrete coring, and waste characterization analyses were utilized by the construction manager for the management of materials generated during the demolition and renovation activities in the building.

Project Manager, Medgar Evers College, Phase I
Environmental Site Assessment and Phase II
Environmental Services, Brooklyn, New York. The
expansion of Medgar Evers College involved the razing of a
NYC Department of Sanitation (NYCDOS) facility located in
Brooklyn, New York where impacted soil from historical
petroleum releases (i.e., gasoline and diesel) are present and
petroleum-related compounds migrated downwards from the
source areas (e.g., tanks, piping, and dispensers) and in some
areas adversely affected perched ground-water quality. In
support of a Draft Generic Environmental Impact Statement
(DGEIS) for DASNY, Mr. Gavras managed a Phase I
Environmental Site Assessment (ESA) of this facility. Based
on the findings of the Phase I ESA, recommended the
following scope of work for Phase II investigation activities at

the site: obtain, review and evaluate existing background information, develop a site-specific Work Plan for characterization of soil and groundwater from a preconstruction standpoint, and provide environmental oversight during construction activities. Developed order-of-magnitude costs for potential remedial activities that may be associated with the discharge of petroleum at the site.

Task Manager, Arverne Urban Renewal Area, Phase I and Phase II Environmental Site Assessment, Queens, New York. Managed Phase I Environmental Site Assessment (ESA) and Sampling and Analysis Plan (SAP) for the Phase II Environmental Site Investigation (ESI) of the Arverne Urban Renewal Area. The Project Area consisted of more than 300acres of beachfront property, residential communities, retail and commercial properties and light industries. The goal of the ESA was to identify possible sources of contaminated material and hazardous waste within and adjacent to the project area. The ESA was undertaken in support of an Environmental Impact Statement (EIS) for the residential, commercial and parkland development of the Arverne Urban Renewal Project for the New York City Department of Housing Preservation and Development. The findings of the ESA were used to develop the Hazardous Materials Section of the EIS. The assessment was consistent with the protocols presented in the New York City Environmental Quality Review (CEQR) guidelines and the CEQR Technical Manual and guidelines of the ASTM Standard Practice for ESAs.

Senior Project Manager, Royal Bank of Scotland GBM Building, Stamford, Connecticut. Conducted extensive prepurchase environmental due diligence for the siting of RBS' future Americas Headquarters. Evaluated soil and groundwater impacts at a number of parcels previously occupied by auto repair garages, gasoline stations, and industrial facilities. Soil was impacted with volatile organic compounds, semi-volatile organic compounds, and metals. Site remediation activities included in-situ waste characterization sampling and analyses of soil. Identified and delineated hot spot areas, and managed the methodical excavation and handling of soil for off-site disposal. Conducted post-excavation soil sampling to verify that the hot-spot areas were remediated. Implemented a community air-monitoring program throughout the remedial excavation activities that involved the monitoring and control of dust and total organic vapors. Additional remedial activities involved the decommissioning, removal, and disposal of eleven underground storage tanks (UST) and petroleum-impacted

John M. Gavras P.G., CPG

Associate Principal

soil. A soil vapor barrier/membrane was incorporated into the building foundation design.

Senior Project Manager, The Queens Family Courthouse, Jamaica, New York. Managed the Phase I ESA, the Phase II ESI, and the remediation of petroleum-impacted and historic urban fill material during site development. Based on the results of the Phase I ESA, several recognized environmental conditions were identified including USTs and open spills associated with the USTs. Subsequent to the Phase I ESA, a Phase II ESI was conducted that involved a ground penetrating radar survey, and the installation and sampling of a number of soil borings and monitoring wells to evaluate the extent and magnitude of petroleum-impacted soil and groundwater contamination beneath the subject property. Based on the results of the Phase II ESI, soil and groundwater impacts (i.e., petroleum product and tetrachloroethene [PCE]) were identified. As extensive site excavation was anticipated as part of this project, it was anticipated that other more significant impacts would be identified. On behalf of the owner, a Brownfield Cleanup Program application was prepared and submitted to the NYSDEC. The proposed redevelopment of the Queens Family Courthouse involved mixed-use retail and residential consisting of approximately 69 100%-affordable- cooperative-units, and 276-mixedincome rental units.

Senior Project Manager, Brooklyn Bay Center, Gravesend Bay, Brooklyn, New York. Managed the remedial investigation of this 8-acre commercial peninsula on Gravesend Bay in Brooklyn that was developed into a BJ's Warehouse with a publically-accessible waterfront esplanade. Developed and obtained NYSDEC approval of a Remedial Action Plan to remediate and remove numerous historic underground storage tanks (UST) that remain at the Site along with any associated petroleum-impacted soil. Historical usage at the Site included a solid waste transfer facility, a coal storage facility, an asphalt plant, auto dealership/rentals, and most recently a school bus parking and maintenance facility. Additionally, an extensive volume of historic urban fill mixed with solid waste material comprised the entire western plateau of the Site because the former transfer station reportedly took in more solid waste that it was able to process. Primary responsibilities included managing the implementation of a Phase I ESA and several Phase II ESIs to characterize in-situ solid waste in the western portion of the Site and petroleum-impacted materials in the eastern portion of the Site. Conducted extensive sampling of the solid waste material and performed a statistical analyses of the soil data

to develop site-specific soil cleanup objectives that were presented to the NYSDEC's Division of Solid Waste in a Beneficial Use Determination Request to beneficially reuse the resultant solid waste material as fill for building up the eastern portion of the Site during its development. Obtained approval of the BUD request from NYSDEC's Solid Waste Division with the stipulation that hot spot would first need to be remediated and then all solid waste would need to be screened out of the fill material prior to its beneficial reuse to build up the eastern portion of the Site. Mr. Gavras authored a comprehensive Solid Waste Mitigation and Soil Management Plan that was implemented during the beneficial reuse of the fill material at the Site. Building design incorporated a passive methane and hydrogen sulfide monitoring system along with a sub-slab vapor depressurization system as engineering controls to protect future occupants of the big box retail center.

Senior Project Manager, RCRA Violation, A. Philip Randolph Houses (NYCHA), New York, New York. Before granting National Environmental Policy Act (NEPA) approval for the New York City Housing Authority (NYCHA) to acquire the A. Philip Randolph Playground in the Harlem section of Manhattan, the Department of Housing and Urban Development (HUD) required that additional information be provided in connection with a Resource Conservation and Recovery Act (RCRA) violation at a nearby Board of Education facility. Mr. Gavras served as Task Manager in charge of managing the supplemental file review addressing the RCRA violation. Based on the findings of the review, it was determined that the RCRA violation was apparently a "paper violation" due to a non-reporting incident. A conclusion was made that the RCRA violation did not appear to present an adverse effect on playground users or pose any conflicts with the current and proposed future use of the site as a playground.

Senior Project Manager, NYCHA Investigative and Remedial Design, Various Locations, New York, New York. Managed investigative and remedial design services at numerous petroleum bulk storage facilities at housing development sites throughout New York, NY. Mr. Gavras assisted with an order of consent issued by the New York State Department of Environmental Conservation to NYCHA. He developed site-specific work plans for conducting comprehensive site assessments and investigations at documented spill sites, and site investigation activities involving soil boring and monitoring well installations to delineate the extent and magnitude of fuel oil contamination

John M. Gavras P.G., CPG

Associate Principal

in the soil and groundwater. Following the investigative phase of the contract, Mr. Gavras managed the preparation of site-specific investigative summaries and remedial action work plans. Based on the results of the site investigations, his team provided remedial design services, as needed, and contract plans and specifications for remediation activities where warranted, implementing and observing any remediation activities.

Senior Hydrogeologist, Groundwater Monitoring Services, Town of Oyster Bay, Oyster Bay, New York. Senior hydrogeologist for the groundwater-monitoring program for the Town of Oyster Bay. Groundwater monitoring was conducted to assess the effectiveness of the remediation system at Old Bethpage Landfill, which is located in Oyster Bay. A volatile organic compound (VOC) plume that originated at the landfill was migrated off site o.5 miles downgradient of the source. The contaminated groundwater was recovered by five high-capacity extraction wells, treated on site, and discharged to an upgradient recharge basin. The remedial system has been operating since April 1992. The remedial system's zone of influence and groundwater quality was monitored on a quarterly basis to assess the progress of the groundwater cleanup and to determine whether the termination criteria for remediation had been met. Mr. Gavras conducted a comprehensive well inventory and assessment, managed the rehabilitation and redevelopment of wells, and coordinated the retrofitting and proper placement of dedicated submersible pumps.

Senior Project Manager, Site Investigation/Hazard Ranking of a Class 2A Site, Hicksville, New York. Supervised Phase I and Phase II site investigations and Hazard Ranking System II scoring to assess chlorinated solvent contamination in soil and groundwater. Key components of the project included drum removal, soil remediation, a comprehensive soil gas survey, extensive groundwater monitoring and assessment, and the generation of supporting data for reclassifying the site as a Class 4 site.

Senior Project Manager, Site Assessment of a Former Color Concentrate Manufacturing Facility and Class 2A Site, Farmingdale, New York, Confidential Potentially Responsible Party (PRP) Group. Managed a preliminary site assessment at a former color concentrate manufacturing facility and Class 2a site for a PRP group. Evaluated the occurrence of metals contamination in soil throughout the site, within dry wells, and in former recharge basins through a comprehensive soil and groundwater-sampling program.

Task Manager, Benjamin Beechwood, LLC Arverne Urban Renewal Area Supplemental Phase I ESA, Queens, New **York.** Managed a supplemental Phase I ESA of a portion of the Arverne Urban Renewal Area in Queens, New York (Project Area) for a developer as part of its environmental due diligence before considering acquisition of the western portion of the Arverne Urban Renewal Area. The Project Area consisted of residential communities, retail and commercial properties and light industry. The primary objective of the Phase I ESA was to update and augment a previous Phase I that was conducted for the New York City Department of Housing Preservation and Development to confirm and identify any new potential recognized environmental conditions within and adjacent to the project area. The findings of the Phase I ESA would be used by the developer to identify and evaluate any recognized environmental conditions. The Phase I ESA was conducted consistent with the ASTM Standard Practice for ESAs.

Project Manager, Site B Phase I ESA and Supplemental File Review for NYCHA Ocean Bay Hope VI Urban Revitalization Area, Queens, New York. Managed the Phase I ESA of Site B at the Ocean Bay Hope VI Urban Revitalization Area. The 110,000-square-foot subject property was comprised of three tax lots along Beach 58th Street between Beach Channel Drive and Elizabeth Avenue. NYCHA was considering using the site for residential, commercial, or community facility use(s) and/or a ferry dock. The primary objective of the Phase I ESA was to identify any recognized environmental conditions in connection with the subject property. The Phase I ESA was conducted consistent with the ASTM Standard Practice for ESAs. Based on the findings of the Phase I ESA, conducted a supplemental file review of an active, off-site petroleum spill of unknown cause that posed a recognized environmental condition in connection with the site. Based on the findings of the supplemental file review, free-phase petroleum product was discovered in a soil boring during a preliminary investigation for a new gas line. The occurrence of free product along the sidewalk at the intersection may have impacted soil and/or groundwater quality at the Site. Further recommendations included conducting a soil gas survey, and soil and/or groundwater sampling as part of a Phase II Environmental Site Investigation (ESI) to further evaluate the extent of any environmental impacts from the active off-site petroleum spill.

GZA GeoEnvironmental of New York
