Subject: Where's the common sense

Sally please forward to the Tree committee and committee on the environment. These two trees were planted yesterday. One is against the road where the huge trailers turn and will RIP the branches off and people walk to avoid traffic. The other on the island is where a tree was cut because it grew into both sides of the street and the overhead wires. That's why the evergreen works.

Note how the grass strip on the sidewalk was filled with concrete and asphalt after the Jefferson Ave bridge project which was actually supposed to be kept grass in the plans. Water isn't absorbed anymore and the many dogs being walked have to burn their feet in the summer because there is no dirt or grass.
